1. Introduction

In November 2022, San Francisco voters approved Proposition L (Prop L), extending the ½-cent sales tax to fund transportation improvements and approving a new 30year Expenditure Plan, which superseded the prior Proposition K Expenditure Plan. The Prop L Expenditure Plan determines eligibility for sales tax funds through a list of 28 programs. It also sets caps for the maximum amount of Prop L funds that will be available for specific programs over the 30-year Expenditure Plan period, totaling up to an estimated \$2.6 billion (2020 \$'s). In order to fully fund the programs, the Expenditure Plan assumes that the Prop L dollars will leverage (or match) another \$23.7 billion (2020 \$'s) in other federal, state, regional, and local funds for a total program cost of \$26.3 billion (2020 \$'s). Some of those leveraged funds will be distributed to San Francisco through funding formulas. In other cases, San Francisco project sponsors will have to aggressively compete for discretionary funds in order to fully fund the Expenditure Plan programs.

The Expenditure Plan includes a number of requirements, including the development of 5-Year Prioritization Programs (5YPPs) as a condition for receiving allocations in each program in the Expenditure Plan. The 5YPPs are intended to provide a stronger link between project selection and expected project performance, to support on time, on-budget project delivery, and optimize use of federal, state and regional matching funds. Other major benefits of the 5YPPs include:

- Provide transparency about how Prop L projects are prioritized,
- Enable public input early and throughout the planning process, and
- Improve agency coordination within and across projects at the earlier stages of the planning process.

The desired outcome of the 5YPPs is the establishment of a strong pipeline of grantready transportation projects that can be advanced as soon as funds (including Prop L, federal, state, and other funds) are available. The 5YPPs are critically important to help achieve the leveraging needed to fully fund the Expenditure Plan programs.

As its centerpiece, each 5YPP contains a 5-year Program of Projects (or project list), ideally including project descriptions, schedule milestones, cost estimates, and full funding plans showing Prop L funds by fiscal year and other matching funds. The Program of Projects (project list) for Traffic Signs and Signals Maintenance is contained in Section 7 of this document.

2. Eligibility and Expected Fund Leveraging

2.1 | ELIGIBILITY

Eligibility for Traffic Signs and Signals Maintenance as identified in the voter approved Prop L Expenditure Plan is as follows, with amounts shown in millions of 2020 dollars:

"Maintenance and upgrade of traffic signs and signals, including for pedestrians and bicyclists. Sponsor Agency: SFMTA. Total Funding: \$126.1M; EP: \$90M."

SFMTA stands for San Francisco Municipal Transportation Agency.

2.2 | EXPECTED FUND LEVERAGING

Leveraging Prop L funds against non-Prop L fund sources is necessary to fully fund the Expenditure Plan programs. Prop L sales tax funds will be used as seed funding for planning and project development to make projects competitive for discretionary fund sources, and to serve as local match needed to secure federal, state, regional, and other grant funding.

Based on Priority 1 (conservative forecast) funding levels, for Traffic Signs and Signals Maintenance, the Prop L Expenditure Plan assumes that for every \$1 of sales tax revenue spent, on average it would be leveraged by about \$0.40 in non-Prop L funds. The Transportation Authority reviews leveraging at the project and project phase (e.g. planning, design, construction) levels as well as for each Expenditure Plan program as a whole.

3. Public Engagement

Transportation Authority staff conducted public engagement to inform the development of the 5YPPs. This section summarizes feedback heard from that engagement, as well as information provided by project sponsors regarding public engagement and community support.

During the Prop L Expenditure Plan development, the Transportation Authority conducted a robust outreach process from Spring 2021 - Winter 2022. The New Expenditure Plan for San Francisco's Half-Cent Sales Tax for Transportation: Outreach Findings report can be found on the Transportation Authority website. Key themes emerged from this process including support for upgraded traffic signs and signals to improve street safety for all road users. As part of development of the 2023 5YPPs, the Transportation Authority conducted outreach and hosted public meetings to gather input about which specific projects and project types should be funded through Prop L in the next five years and to seek input on how to select projects for each Expenditure Plan program. The meetings included a virtual meeting for interested members of the former Expenditure Plan Advisory Committee who helped develop Prop L and representatives of equity-focused community-based organizations; a virtual town hall; and presentations at community group meetings, as requested. There was also an online multi-lingual survey and opportunities for public input through the Transportation Authority's website and at multiple Transportation Authority Community Advisory Committee and Transportation Authority Board meetings. The Transportation Authority website also includes a list of staff contacts to facilitate public engagement directly with project sponsors.

To learn more, visit <u>sfcta.org/ExpenditurePlan</u>. The findings from the 5YPP outreach process will be published on this webpage in November 2023.

4. Performance Measures

Prop L requires the establishment of performance measures for each program in the Expenditure Plan. The intent is to demonstrate the system performance benefits of sales tax projects (e.g. reduced transit travel time), to ensure funds are being used cost effectively, and to inform programming of future Prop L funds, as well as programming and prioritization of other funds by the Transportation Authority (e.g. Transportation Fund for Clean Air, Prop AA Vehicle Registration Fee funds).

After reviewing San Francisco's Congestion Management Program and consulting with eligible sponsoring agencies, the Transportation Authority recommends that the following performance measures and counts be applied to projects included in the Traffic Signs and Signals Maintenance 5YPP:

Performance Measure

• Average age of traffic signals and signs

Counts

- Number of intersections at which traffic signal/sign upgrades were completed
- Number of traffic signals/signs replaced or upgraded
- Number of signals with exclusive phases for bicycles and transit replaced or upgraded

- Number and percent of signalized intersections with accessible pedestrian signals (APS)
- Number and percent of signalized intersections with transit signal priority
- Number and percent of signalized intersections with pedestrian countdown signals

5. Project Delivery Snapshot

Since this is the inaugural Prop L 5YPP, we are looking to the prior Prop K sales tax program to assess project delivery trends for similar types of projects. Project delivery for previously-funded projects is one important consideration when we evaluate project sponsors' proposed requests for Prop L funding, particularly with respect to project readiness.

As required by the Prop L Expenditure Plan, the next 5YPP update will be informed by a citywide geographic distribution of sales tax project allocations and the distribution of projects located in Equity Priority Communities and/or benefiting disadvantaged populations.

Prop K Project Delivery

Prop K has funded Traffic Signs and Signals Maintenance since 2004. Table 1 shows the Project Status of open Traffic Signs and Signals Maintenance grants under Prop K.

| SPONSOR | PROJECT NAME | PHASE(S) FUNDED | FY OF Allocation | ALLOCATED (AS OF JULY 2023) | REMAINING BALANCE (AS OF 9/27/23) | OPEN FOR USE? |
|---------|--|--------------------|---------------------|-----------------------------------|---|------------------|
| SFMTA | 19th Avenue Signals Phase III | Design | 2014/15 | \$630,000 | \$32,468 | Yes |
| SFMTA | Traffic Signal Upgrade Contract 34 [Vision Zero] | Design | 2014/15 | \$518,000 | \$18,394 | Yes |
| SFMTA | SFgo Van Ness Corridor Management | Construction | 2015/16 | \$2,275,000 | \$256,840 | Yes |
| SFMTA | 19th Avenue Signals Phase III - Four Intersections | Construction | 2016/17 | \$1,399,608 | \$1,377,878* | Yes |
| SFMTA | 19th Avenue Signals Phase III - Rossmoor | Construction | 2016/17 | \$1,120,392 | \$691,080 | Yes |
| SFMTA | Traffic Signal Upgrade Contract 34 - Additional Funds | Construction | 2017/18 | \$1,218,680 | \$321,216 | Yes |
| SFMTA | Traffic Signal Upgrade Contract 35 | Design | 2017/18 | \$840,000 | \$5,000 | |

Table 1. Prop K Project Status

| SPONSOR | PROJECT NAME | PHASE(S) FUNDED | FY OF Allocation | ALLOCATED (AS OF JULY 2023) | REMAINING BALANCE (AS OF 9/27/23) | OPEN FOR USE? |
|---------|--|--------------------|---------------------|-----------------------------------|---|------------------|
| SFMTA | Great Highway Signal Upgrade – EP-31 | Design | 2019/20 | \$65,606 | \$5,000 | |
| SFMTA | Great Highway Signal Upgrade - EP-33 | Design | 2019/20 | \$154,394 | \$100,048 | |
| SFMTA | Traffic Signal Hardware FY20 | Construction | 2019/20 | \$330,000 | \$5,675 | Yes |
| SFMTA | Transit Signal Priority | Construction | 2019/20 | \$2,320,000 | \$473,357 | |
| SFMTA | Traffic Signal Upgrade Contract 36 - Design | Design | 2019/20 | \$600,000 | \$5,000 | |
| SFMTA | Traffic Signal Visibility Upgrades FY20 | Construction | 2019/20 | \$330,000 | \$97,810 | Yes |
| SFMTA | Traffic Sign Upgrades FY20 | Construction | 2019/20 | \$220,000 | \$75,225 | Yes |
| SFMTA | Clay & Grant and Stockton & Sutter Conduits and Signal Modifications | Construction | 2020/21 | \$420,000 | \$401,530 | |
| SFMTA | Traffic Signal Visibility Upgrades FY22 | Construction | 2020/21 | \$660,000 | \$584,333 | |
| SFMTA | Bus Transit Signal Priority | Construction | 2021/22 | \$1,350,883 | \$1,279,193 | |
| SFMTA | Traffic Signal Hardware FY22 | Construction | 2021/22 | \$660,000 | \$639,752 | |
| SFMTA | Western Addition Area Traffic Signal Upgrades - Phase 1 | Construction | 2021/22 | \$1,195,859 | \$1,195,859 | |
| SFMTA | Clay & Grant, Stockton & Sutter Conduits and Signal Modifications - Additional Funds | Construction | 2022/23 | \$240,000 | \$240,000 | |
| SFMTA | Great Highway Signal Upgrade - Additional Funds | Design | 2022/23 | \$480,000 | \$480,000 | |
| SFMTA | Traffic Signal Upgrade Contract 36 | Construction | 2022/23 | \$2,367,909 | \$2,367,909 | |
| SFMTA | Vision Zero Sign Upgrade | Design | 2022/23 | \$6,000 | \$ 6,000 | |
| SFMTA | Vision Zero Sign Upgrade | Construction | 2022/23 | \$214,000 | \$214,000 | |
| | | | | | | |

Projects are sorted by allocation year, then name.

*Invoices pending

One of the main project delivery challenges for SFTMA's Traffic Signs and Signals Maintenance projects is the necessary coordination with City agencies and private companies. For example, PG&E recently changed the process for securing service point connections for City projects including signal projects. The SFMTA can no longer request service points through the same unmetered, wholesale (non-retail) process that they have historically used in the past. The major changes for PG&E service point connections for City projects is a major on-going unresolved issue that has been discussed in some form with various staff from SFMTA, Public Works, Public Utilities Commission, PG&E, and even the Board of Supervisors. The Federal Energy Regulatory Commission (FERC) and the City Attorney's Office are also involved. The SFMTA has taken steps to redesign the service point connections on their projects under the still-evolving PG&E process, but project delivery has been affected in that designing and securing service point connections requires more time and effort for SFMTA staff compared to the previous service point connection process.

Another delivery challenge is that contract negotiations, as well as the City's contracting process, are lengthy. Duration is further impacted by staffing challenges of the multiple City departments involved in this process. The approval process, which generally requires approval from the City's Civil Service Commission, often takes longer than planned.

An additional delivery challenge is the development of curb ramp scope for recent projects. Public Works recently initiated a more robust design protocol that involve recommendations to rebuild existing curb ramps to meet the latest design standards in conjunction with signal projects. The process to analyze existing curb ramps has required additional staff costs, additional design time, and has contributed to staffing challenges. This prompted SFMTA staff to engage Public Works staff earlier in the design process to allow for curb ramp scope development and completion. SFMTA staff has also requested training by Public Works in surveying curb ramps in order to expedite the design process and determine project scope. This requested training is pending.

There is a high demand for signal shop work for projects including Vision Zero, transit signal priority, corridor projects, etc. Staff resource constraints in the signal shop have often been a limiting factor in the pace of project delivery. Transportation Authority staff will seek to evaluate capacity when allocation requests come in and look at how prior grants are progressing. The signal shop recently hired two electricians and is in the process of hiring two more. SFMTA staff anticipate that this will help support inhouse projects as well as construction contracts.

Lastly, we will continue working with SFMTA to submit final billings and close out Prop K grants for projects that are completed, to free up funds that become available for reinvestment in Prop L projects.

6. Project Prioritization

The intent of establishing and documenting a methodology to select proposed projects is to provide the Transportation Authority Board, the public, and project sponsors with a clear understanding of how projects are prioritized for funding within

each Prop L program. Working in consultation with project sponsors and drawing upon the Transportation Authority's experience with prioritizing projects for grant funding, Transportation Authority staff developed a set of Prop L program-wide criteria to help select projects in each of the 28 Prop L programs. In addition, most programs also have program-specific criteria to inform priorities such as improving transit reliability and travel time or replacing assets at the end of their useful lives. The Prop L program-wide criteria include:

- Project readiness
- Relative level of need or urgency
- Benefit to disadvantaged populations
- Level and diversity of community support
- Leveraging

The above criteria, along with any program-specific criteria, are scored for each proposed project. In addition, the evaluation process also considers fair geographic distribution and cost-effectiveness.

San Francisco's <u>Equity Priority Communities</u> are an important factor in assessing projects and benefits to disadvantaged populations. See the map on the Transportation Authority's website: <u>https://epc-map.sfcta.org/</u>

The Project Scoring Table in Section 7 shows the Prop L program-wide criteria, the program-specific criteria, criteria definitions, and maximum possible points for projects proposed for the Traffic Signs and Signals Maintenance 5YPP. For each proposed project, the project sponsors first scored the project and then Transportation Authority staff reviewed and refined the scoring, as needed, to ensure consistent application of the prioritization criteria.

7. Project List

This section shows how each project proposed for funding from the Traffic Signs and Signals Maintenance program ranked based on the prioritization methodology described in Section 6; the 5-Year Program of Projects or Project List recommended for Prop L funds; and Anticipated Leveraging. The Project Information Forms with details on scope, schedule, cost, funding are included in Appendix A.

Approving this 5YPP requires amending the Prop L Strategic Plan to advance funds from future years into the current five-year period. The recommended project list would advance approximately \$17,178,500 or 202% of the \$8,515,559 pay-go amount in the first five years of the 30-year program. We anticipated significant acceleration of the funds in the Traffic Signs and Signals Maintenance program, because Prop L funds for the first five years are significantly reduced (e.g. by more than half) compared to year six on, due to Prop K carryforward of remaining balances and outstanding debt. We are comfortable supporting this level of advancement of funds because Traffic Signs and Signals Maintenance projects are key to supporting the City's Vision Zero goal, making it important to move these projects forward now so the public can benefit from the safety improvements sooner rather than later. Further we do not expect this level of advancement in the next five year period. If projects do not proceed as quickly as proposed and / or seek sales tax reimbursement more slowly than anticipated, the reduced finance costs will be made available for new projects in the next 5YPP.

Prop L Project Submissions Evaluation - EP 17 Traffic Signs and Signals Maintenance

Prop L Project Submissions Evaluation - EP 17 Traffic Signs and Signals Maintenance

| Signal Priority for Transit and/or Emergency Vehicles: Highest possible score is 2. Project reduces delay and improves reliability for transit and/or emergency vehicles. |
|---|
| Need (Asset Useful Life): Highest possible score is 2. Project replaces asset that has reached the end of useful life per industry-accepted levels. |
| Form. |
| Safety: Highest possible score is 4. Project addresses documented safety issue(s) and/or reduces potential conflict between modes. Additional priority for projects benefiting multiple users of multiple modes (e.g. transit passenger, pedestrian, cyclist, motorist, transit employee), or located on the High Injury Network. Points are based on the safety information presented in the Project Information |
| and the likely competitiveness for securing non-Prop L funds from discretionary sources. |
| Leveraging: Highest possible score is 4. Project demonstrates actual or potential leveraging of Prop L funds, as indicated in the funding plan. Factors to consider include the status of other fund source |
| Zero points for a project that was not developed out of a community-based planning process or did not have other forms of demonstrated community support. |
| from disadvantaged populations. |
| One point for a project not in an adopted community based plan, but with evidence of support from <i>either</i> neighborhood stakeholders or citywide groups. Project does not have documented support |
| support from disadvantaged populations. |
| disadvantaged populations. Three points for a project not in an adopted community based plan, but with evidence of support from <i>both</i> neighborhood stakeholders and citywide groups. Project does not have documented |
| Five points for a project that 1) is in an adopted community based plan or with evidence of diverse (neighborhood level and citywide) community support and 2) has documented support from |
| community-based planning process. |
| Level and Diversity of Community Support: Highest possible score is 5. Project has clear and diverse community support, including from disadvantaged populations and/or was developed out of a |
| Information Form. |
| service or improved service, improved safety, etc.), whether or not the project is directly located in an Equity Priority Community. Points are based on the description of benefits presented in the Project |
| Benefits to Disadvantaged Populations: Highest possible score is 5. Project provides direct benefits to disadvantaged populations, including communities historically harmed by displacement, transportation policies, and projects that utilized eminent domain. Project directly impacts the ability of disadvantaged populations to access transportation (e.g. new or enhanced infrastructure, new |
| |
| minimize costs and construction impacts), to support another funded or proposed project (e.g. signal conduit installation coordination with a street resurfacing project) or to meet timely use of funds deadlines associated with matching funds. |
| Relative Level of Need or Urgency (time sensitive): Highest possible score is 4. Project needs to proceed in the proposed timeframe to enable construction coordination with another project (e.g. |
| be completed before beginning the next phase, and whether hugation, community opposition of other factors pose a significant risk to project advancement, as proposed. |
| and funding plan relative to current project status (e.g. expect more detail and certainty for a project about to enter construction than design); whether prior project phases are completed or expected be completed before beginning the next phase; and whether litigation, community opposition or other factors pose a significant risk to project advancement, as proposed. |

Anticipated Leveraging

The table below compares Prop L Expenditure Plan assumptions with anticipated leveraging for the recommended projects based on the Project Information Forms. At time of allocation, Transportation Authority staff will again compare the actual leveraging to the expected leveraging.

Table 2. Prop L Leveraging: Expected vs. Proposed for Fiscal Years 2023/24 - 2027/28

| PROJECT | EXPECTED LEVERAGING IN EP (NON-PROP L FUNDS) | ANTICIPATED LEVERAGING (NON-PROP L FUNDS) |
|---|---|--|
| Bus Transit Signal Priority (TSP) | 28.6% | 45% |
| Citywide Coordination: Traffic Signal Conduit Program | 28.6% | 0% |
| Great Highway Signal Upgrades | 28.6% | 2.6% |
| Traffic Signal Hardware Replacement Program | 28.6% | 0.% |
| Tenderloin Signal Upgrade | 28.6% | 87.9% |
| Traffic Sign Replacement Program | 28.6% | 0% |
| Traffic Signal Upgrade Contract 35 | 28.6% | 22.9% |
| Traffic Signal Visibility Upgrades Program | 28.6% | 0% |
| Western Addition Area Signal Upgrades Phase 2 | 28.6% | 80.6% |
| Traffic Signs and Signals Maintenance Program Total | 28.6% | 53.4% |

Expected leveraging for the Traffic Signs and Signals Maintenance program over the life of the 30-year measure is 28.6%. Based on the PIFs, the anticipated leveraging for the proposed projects exceeds the leveraging assumptions for the program at 53.4%. Ongoing annual programs to maintain the infrastructure in a state of good repair (e.g. Traffic Sign Replacement and Traffic Signal Hardware Replacement) are funded entirely by Prop L as they are difficult to fund with competitive grants. For other larger signal projects, Prop L will leverage significant amounts of other funding. For example, the Western Addition project has secured a \$17 million federal Safe Streets and Roads for All grant and a \$3.6 million request from Prop L will provide the required local match.

Notes

Prop L programming is requested annually in FYs 2024/25-2027/28. Above schedule is a placeholder for all four years of proposed work For the installation of new and existing TSP systems, the design phase is considered to be part of the construction phase. Design for deployment of TSP to specific intersections or corridors is part of the work done to get TSP parameters programmed into the TSP, network devices and traffic signal controllers at each location in preparation for installation.

Notes

Prop L EP 1 Muni Reliability and Efficiency Improvements funds, which would support expansion of the Transit Signal Priority, CCTV, and VMS networks, are subject to Transportation Authority Board approval in a future round of 5YPP adoption, anticipated in February 2024. The EP 1 funds are not being recommended in this 5YPP, but are shown for reference.

*IPIC funds are less certain given the pace of economic recovery. There is a strong likelihood that other funds will need to be identified to preserve leveraging.

SFCTA has a number of questions/concerns about this proposed request that we will revisit when an allocation request is submitted and better/more up to date information is available, such as: 1) We will confirm leveraging (IPIC or other funds) when an allocation request is submitted. 2) We will evaluate project delivery of the prior year grants when deciding whether to recommend allocation at that time. This project relies heavily on Signal Shop resources which are in high demand for many Vision Zero and other projects in addition to TSP. 3) Review updated detailed scope to ensure it only includes capital costs, which are eligible for Prop L, and not (routine) operations and maintenance work.

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|---|
| Project Name | Bus Transit Signal Priority (TSP) |
| Relative Level of Need or Urgency (time sensitive) | Our current TSP system has proved to be a great asset in reducing signal delays and travel times. It is critical to continue expanding to locations skipped during the initial implementation of TSP to the larger corridor due to construction or other circumstances that have changed since. As technology continues to evolve and our TSP and network equipment continues to age, it is also important to investigate and implement new technologies that would make monitoring, optimization and expansion of our system more efficient. |
| | It is also critical to have funds in place as shown in the cash flow to ensure continuous monitoring and maintenance of the existing CCTV, VMS, TSP and network systems, as well as to move forward with the purchase of new equipment and labor needed to replace aging equipment. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | TSP is a technology identified in the original SFgo strategic plan. It is also one of technology tools recognized in TEP/Muni Forward that would improve transit on-time performance and enhance transit safety. Outreach for TSP was part of the SFgo and TEP planning phase. |
| | No outreach is needed for equipment replacement. |
| | Similar to TSP, new installation of CCTV cameras was identified in the original SFgo strategic plan. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | The TSP and network systems have been deployed citywide along Muni transit routes. These routes travel citywide and serve diverse communities within San Francisco, including those that could be considered disadvantaged or vulnerable. Continuous and on-going service, repair and replacement of TSP and network equipment will ensure that these communities have access to reliable public transportation. |
| | During emergency situations, CCTV cameras have not only been used to monitor traffic, but also to monitor different site conditions and determine response action. During the initial response to Covid-19, key member of the Department Operations Center (DOC) and the Emergency Operations Center (EOC) were assigned to support the Muni Unsheltered Passenger Transport Program. The program's objective was to pick up passengers from navigation centers to transport to hotel, used the cameras to adjust route planning, monitor passenger drop off times, monitor Muni ambassador program to ensure physical distancing. |
| | The majority of our Variable Message Signs (VMS) are located within areas identified in the Equity Priority Communities map. Similar to CCTVs, VMS were also used during the initial response to Covid-19 to remind people to maintain physical distance, as well as to inform people where nearby vaccination sites were located. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco Transportation Plan Alignment (SFTP) | Equity, Environmental Sustainability, Economic Vitality, Safety and Livability |

| | The project advances SFTP goals by providing continuous and on-going service, repair and replacement of TSP, network, CCTVs and VMS equipment that has been deployed citywide and that ensures that everyone in San Francisco has access to reliable public transportation. TSP reduces the number of times buses have to stop at red lights, also reducing impacts to the environment caused by buses breaking/accelerating. TSP in conjunction with other tools has also help mitigate some of the travel time impacts to transit caused by longer pedestrian crossing times. Additionally, TSP and other transit measures can pay for themselves over time. Running buses costs money; when travel time is reduced, bus operation and maintenance costs are reduced. |
|----------------------|---|
| | es criteria that are specific to each Expenditure Plan program. The questions that are or each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
| | 01- Muni Reliability and Efficiency Improvements |
| Safety | The same equipment installed at all the intersections to provide TSP is also programmed by SFMTA engineers and Signal Shop electricians to allow emergency preemption to SFFD vehicles equipped with the technology. TSP equipment has been installed at about 500 intersections located citywide, including many intersections on the High Injury Network. See maps included with this request. SFMTA has not performed any before/after studies to see the impact on collisions with the implementation of TSP. However, a 2021 American Society of Civil Engineers (ASCE) study, and consistent with other smaller studies done in two other US cities, Australia and Canada between 2017 and 2019, found that there is an overall reduction on collisions along corridors after TSP was implemented. TSP has been deployed citywide, including at intersections located on the HIN. See attached map. CCTV cameras are used to remotely monitor traffic and roadway conditions allowing for more eyes on the streets to evaluate and address site conditions and improve safety. CCTV locations are strategically selected to more efficiently monitor field conditions, with a focus on transit, enforcement and roadway construction needs, and these are used to support various daily and emergency operations by SFMTA's Transit Management Center (TMC). During special events and emergency situations, SFMTA staff uses the cameras to monitor road conditions and determine response actions. Based on camera activity decisions are |
| | made to (1) deploy parking control officers to shut down streets to vehicular traffic (2) adjust parking control officer staffing levels (3) re-route transit to adjacent streets and (4) remove non-essential staff such as maintenance personnel and transit ambassadors from the streets for safety concerns. CCTV cameras are deployed citywide, including at intersections located on the HIN. See attached map. |
| Improves Reliability | TSP plays an important role in ensuring that passengers can reach their destinations reliably, by making travel times more predictable. Per the 2021 Value of TSP report prepared by SFMTA's TSP vendor (available upon request), GTT found that TSP provides improved travel times and reduced stop rated through about 70% of the intersections. By reducing the number of times buses have to stop at red lights and making travel times more predictable, TSP has help make transit more reliable citywide. CCTV cameras are used to monitor traffic and roadway conditions, allowing engineers to make signal timing changes, optimize TSP and/or implement other roadway changes to improve site conditions that helps transit be more reliable. |

| Improves Travel Time | Per the 2021 Value of TSP report prepared by SFMTA's TSP vendor (available upon request), GTT found that TSP provides improved travel times and reduced stop rated through about 70% of the intersections with an average time savings of 3% for selected segments. This average saving is diluted by many variables, especially when evaluating larger segments as it was done for this report. It is also worth considering that in 2018, SFMTA adopted a 3.0 ft/s pedestrian clearance timing that provides longer crossing times for pedestrians but reduces the duration of the green light. CCTV cameras are used to monitor traffic and roadway conditions, allowing engineers to make signal timing changes, optimize TSP and/or implement other roadway changes to improve site conditions that help reduce travel times. |
|-----------------------------------|---|
| Accessibility and Connectivity | TSP has been deployed to all Muni's rapid routes connecting regional public transportation systems such as BART, AC Transit and Caltrans to Muni's local routes that serve residential neighborhoods, as well as to infrastructure aimed to encourage and facilitate bicycle and pedestrian access. TSP makes transit more predictable and reliable, helping passengers better plan their travel times and transfers among Muni routes or to/from other transit systems, and as a result improving connectivity and accessibility to our transit system. |

The next section only applies to projects that are proposed under multiple Expenditure Plan programs. The questions that are required to be filled out for each program will auto-populate once the Second Prop L program (row 7) is selected on the Scope & Schedule tab.

| | 17- Traffic Signs and Signals Maintenance |
|--|---|
| Safety | The same equipment installed at all the intersections to provide TSP is also programmed by SFMTA engineers and Signal Shop electricians to allow emergency preemption to SFFD vehicles equipped with the technology. TSP equipment has been installed at about 500 intersections located citywide, including many intersections on the High Injury Network. See maps included with this request. SFMTA has not performed any before/after studies to see the impact on collisions with the implementation of TSP. However, a 2021 American Society of Civil Engineers (ASCE) study, and consistent with other smaller studies done in two other US cities, Australia and Canada between 2017 and 2019, found that there is an overall reduction on collisions along corridors after TSP was implemented. TSP has been deployed citywide, including at intersections located on the HIN. See attached map. CCTV cameras are used to remotely monitor traffic and roadway conditions allowing for more eyes on the streets to evaluate and address site conditions and improve safety. CCTV locations are strategically selected to more efficiently monitor field conditions, with a focus on transit, enforcement and roadway construction needs, and these are used to support various daily and emergency operations by SFMTA's Transit Management Center (TMC). During special events and emergency situations, SFMTA staff uses the cameras to monitor road conditions and determine response actions. Based on camera activity decisions are |
| | made to (1) deploy parking control officers to shut down streets to vehicular traffic (2) adjust parking control officer staffing levels (3) re-route transit to adjacent streets and (4) remove non-essential staff such as maintenance personnel and transit ambassadors from the streets for safety concerns. CCTV cameras are deployed citywide, including at intersections located on the HIN. See attached map. The SFMTA currently owns, maintains, and operates 26 VMS units within the City of San Francisco. VMS help to disseminate information to the public, including roadway incident alerts, roadway disruptions due to construction or planned special events, and public |
| | service announcements. VMS have been strategically located to guide road users from freeway exits and on major corridors to events, garages, and major destinations. The primary use of VMS is to notify motorists of unexpected incidents that could affect safety and/or efficiency of travel. Some incidents that might warrant VMS messaging include lane or road closures, detours, construction, planned special events, or other changed road conditions. See attached map. |
| Need (Asset Useful Life) | This is an on-going project to replace TSP and network equipment as it reaches the end of useful life. Some of this equipment has been in place for 5-years or longer, and needs to be replaced or repaired in order to support new technology or firmware and software updates that allow for the whole system to continue to work to its maximum capacity. |
| Signal Priority for Transit and/or Emergency Vehicles | This project has a direct impact to transit by providing state of good repair to TSP and network equipment that allows to hold the green light or shorten the red light a predetermined value to reduce the number of times and how long buses have to stop at a signalized intersection. This same equipment is also able to provide emergency vehicle preemption to SFFD vehicles equipped with similar equipment to the one used on Muni buses, but SFFD equipment is programmed to request traffic signal controller to stop all vehicles and pedestrian movements except for vehicular traffic traveling in the same direction as emergency vehicles. |

Attachment 1: Bus Transit Signal Priority Detailed Scope

Project Summary

EP-1: Bus Transit Signal Priority- Expansion

This request will fund the purchase and installation of Transit Signal Priority (TSP) and network equipment to expand the system to intersections where recent projects installed new traffic signals and at certain intersections that were not upgraded when the larger corridor was equipped with TSP. The scope also includes a new service agreement with the TSP vendor, and implementation of new TSP technology, including a new central management software to monitor and analyze TSP performance that would allow engineers to optimize TSP timing and detection parameters to improve transit travel speeds and reliability more efficiently. Scope also includes the installation of new CCTV cameras at strategic locations to support transit.

EP-17: Bus Transit Signal Priority – State of Good Repair & New Installation of CCTV Cameras

SOGR: Requested funds would be used for state of good repair of Transit Signal Priority (TSP) and network equipment. Repair and replacement of existing TSP and network equipment along Muni routes at locations where it is nearing the end of its useful life and procure extended warranties where necessary to ensure that existing equipment continues functioning to its maximum capacity.

Funds will also be used for extended warranty services for Variable Message Signs (VMS) used to disseminate information to the public, including roadway incident alerts, roadway disruptions due to construction or planned special events, and public service announcements.

CCTV Cameras: This request will fund installation of new CCTV cameras at locations strategically selected to more efficiently monitor traffic and field conditions.

Detailed Scope

The SFgo program manages the City's intelligent transportation system (ITS) and is responsible for 1) transit signal priority (TSP) Muni, and emergency vehicle preemption (EVP) for San Francisco's Fire Department; 2) Variable Message Signs (VMS) used to disseminate information to the public, including roadway incident alerts, roadway disruptions due to construction or planned special events, and public service announcements; 3) CCTV cameras installed at locations strategically selected to more efficiently monitor traffic and field conditions, and to support various SFMTA's daily operations, as well as emergency operations, planned and unplanned street events, and monitoring construction site activities; and 4) the traffic signal communication network which allows for remote two-way communication, and monitoring and operations of TSP, VMS and CCTV equipment, as well as remote monitoring of other traffic signal devices managed by SFMTA's Traffic Signal Shop.

Transit Signal Priority (TSP) installations started citywide in 2012 with a goal of fully equipping every transit vehicle and every signalized intersection on a Muni bus route with TSP, approximately 600 intersections in all. To date SFMTA has equipped about 500 intersections with TSP, including all the Muni Rapid route corridors. Also, 622 intersections are equipped with EVP, 740 intersections are connected to the communication network (out of 1300 total signalized intersections), 197 intersections are equipped with CCTV cameras, and 26 Variable Message Signs are located at strategic locations to broadcast information to the public.

As part of EP1, SFMTA will use the requested funds to expand transit signal priority (TSP) and communication equipment at intersections where recent projects just installed new traffic signals and at certain intersections that were not upgraded when the larger corridor was equipped. New equipment to be purchased includes TSP intersection equipment, traffic signal controller equipment, and networking equipment. Funds will also be used for research and deployment of new TSP technology, including a new central management software to monitor and analyze TSP performance.

The exact number of intersections with TSP installations or upgrades will depend on the condition of the existing signal infrastructure (e.g., conduits, signal controllers, networking equipment). Installation costs vary from \$15,000 to \$80,000 per intersection. Factors affecting cost include need for updated controller firmware; controller cabinet must be upgraded to accommodate additional equipment; existing conduits in bad condition; there is already an existing TSP radio at an intersection but no wireless radio for a network connection; need for a fiber optic connection because the bandwidth of the wireless radio is limited by poor line-of-sight or distance. For newly signalized intersections, the cost of installing TSP equipment will depend on the need for a fiber optic connection. Whenever possible, other capital resources will be used to minimize the costs for new TSP installations. See attached list of locations where SFMTA is planning to install new TSP equipment over the next few years pending further feasibility analysis.

Currently, SFMTA can monitor the impact of TSP on transit performance through two data sources – (1) via intersection controllers and (2) via TSP radios on buses. The first method allows SFMTA to remotely check into each network-connected traffic controller front panel screen to see the current signal timing by phase and whether TSP is enabled. The second method allows SFMTA to pull data logs on each bus to see how many TSP calls have been placed, at which intersections and what times. Through the logs, SFMTA can tell if equipment is properly functioning in each intersection and bus. Some TSP features will be available remotely for staff at the Transportation Management Center to monitor. For security reasons, access to the first method of viewing traffic signal controller displays will be limited to certain traffic engineers and electricians. The two methods mentioned above are very manual and time consuming. A new central management software would simplify the process by providing performance metrics and system status that would allow traffic engineers and electricians to identify locations where the equipment is not working properly or where TSP should be optimized.

Benefits: The benefits from the proposed investment will include the following:

(1) Improved transit performance- TSP is used to extend green lights or to bring up green lights earlier to prioritize transit vehicles that are approaching the intersection. TSP improves the odds that a transit vehicle sees a green light and will endure reduced red-light delay thus improving both reliability and travel times.

(2) Updated traffic signal timing to latest standards – Signal timing will be updated with new installation of TSP equipment to reflect the latest standards for Yellows, All-Reds and pedestrian clearance.

(3) Remote monitoring – Installed equipment will allow SFMTA to remotely check into an intersection and observe current traffic signal timing and produce maintenance logs to review timestamped information on when TSP calls were made, and which bus number made the call.

(4) A central management software to monitor and analyze TSP performance would allow engineers to optimize TSP timing and detection parameters more efficiently to improve transit travel speeds and reliability.

As part of EP-17, SFMTA will use the requested funds to repair or replace existing transit signal priority (TSP) related devices, including radios, controller equipment, networking equipment and CCTV equipment that is nearing the end of its useful life. Requested funds will also be used for network optimization at intersections already equipped with TSP radios and antennas to ensure that the full benefit of the capital improvement is achieved.

The primary equipment to be repaired, replaced or covered by extended warranties through the requested allocation will be:

- Intersection-installed radios to communicate with the radios on the buses.
- Phase selector cards to be installed inside traffic signal controller cabinets. These are used to translate information from intersection TSP radios to traffic signal controllers.
- Wireless radios and switches to provide remote access to connect to TSP intersections to monitor activity and to pull maintenance logs. Cables, Ethernet cords, mounting brackets to install and connect TSP intersections equipment to the network.
- CCTV cameras to monitor traffic and field conditions that impact transit and TSP performance.

• Variable Message Signs (VMS) used to disseminate information to the public, including roadway incident alerts, roadway disruptions due to construction or planned special events, and public service announcements.

The subject request will fund equipment purchases, labor costs for signal timing engineering and equipment installation, and extended warranties for certain existing equipment to ensure continued manufacturer support. Whenever possible, repairs and replacement of TSP and network equipment will be coordinated with other projects or efforts to reduce time and costs.

Benefits:

The benefits from the proposed investment will include the following:

(1) Improved transit performance - TSP is used to extend green lights or to bring up green lights earlier to prioritize transit vehicles that are approaching the intersection. TSP improves the odds that a transit vehicle sees a green light or gets a shorter red-light, thus reducing red-light delays, improving both transit reliability and travel times. On-going repairs and replacement of equipment that is nearing end-of-life will ensure that the TSP system continues to perform to its maximum capacity.

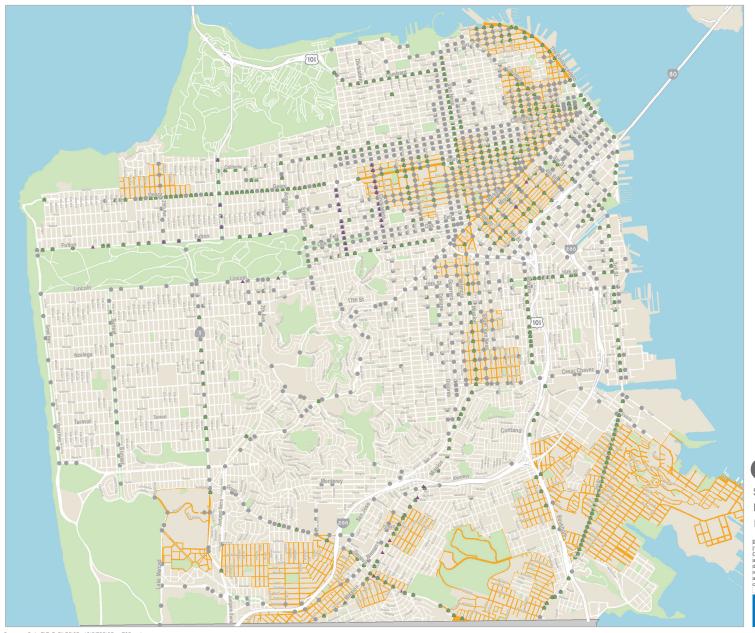

(2) Remote monitoring – Installed equipment allows SFMTA to remotely check into an intersection and observe current traffic signal timing and produce maintenance logs to review timestamped information on when a bus made a call requesting TSP to the traffic signal controller and which bus number made the call. On-going and as-needed repair and replacement of network equipment that is nearing end-of-life will ensure continuous and reliable monitoring and communication with the TSP system.

(3) Continued support for Variable Message Signs (VMS) that otherwise are out of warranty and require special tools and skills to be serviced.

As part of EP-17, SFMTA will use the requested funds to install new CCTV cameras at locations strategically selected to support various SFMTA's daily operations, as well as emergency operations,

planned and unplanned street events, and monitoring construction site activities. These cameras allow staff to assess each situation remotely, resulting in faster and more efficient trouble shooting and response times.

Implementation: As part of the two EPs, SFMTA Streets Division will (1) manage the issuance and administration of the purchase orders for TSP and network related equipment, CCTV cameras and warranty extensions for VMS and other equipment, (2) perform as-needed traffic signal timing updates to optimize and update TSP and emergency preemption parameters, (3) SFMTA's Signal Shop will install new CCTV cameras and TSP intersection equipment, and (4) SFMTA's Signal Shop will also remotely monitor the equipment, perform intersection equipment replacement and work with SFMTA IT to configure and optimize network equipment, and ensure compatibility with the existing TSP system.

SFMTA Transit Signal Priority

Notes

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|--|
| Project Name | City Coordination Opportunities: Traffic Signal Conduit Program |
| Relative Level of Need or Urgency (time sensitive) | Locations included as part of this program are selected to enable construction coordination with other projects, usually Public Works paving, curb ramp, or streetscape projects. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | Although this project has not been specifically discussed with communities disproportionately impacted by discriminatory practices, the scope of this project is expected to be well-received as the final scope will likely include upgrading of traffic signal infrastructure at various equity priority communities throughout in San Francisco. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. MTA takes recommendations from the Community Based Transportation Plans to inform/prioritize locations for new signal conduit coordination opportunities. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | San Francisco's Vision Zero program is guided by core principles that reflect that traffic fatalities are preventable, and that traffic safety interventions will mitigate the likelihood that a collision results in death. This project will facilitate the implementation of future signal projects to improve safety and help the City reach its Vision Zero goal of eliminating all traffic fatalities and severe injuries. It will also maintain SFMTA's assets in a state of good repair which is critical to ensuring a safe and reliable transportation system. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. Based on previous history with this programmatic item, one of the most common signal upgrades facilitated by conduits installed as part of this program is the installation of accessible pedestrian signals which benefits visually impaired pedestrians. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| <u>San Francisco</u> <u>Transportation Plan</u> <u>Alignment (SFTP)</u> | Safety and Livability The installation of conduits and other work as part of this project will allow for the installation of future installation of Vision Zero safety scope such as new traffic signals, pedestrian countdown signals, accessible pedestrian signals, and new mast arms. |

| | s criteria that are specific to each Expenditure Plan program. The questions that are each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
|--|---|
| | 17- Traffic Signs and Signals Maintenance |
| Safety | Based on previous history with this programmatic item, one of the most common uses for new conduit installations has been in support of future signal upgrades or new signals to install pedestrian countdown signals and accessible pedestrian signals which benefits pedestrians. New conduit installations could also benefit multiple modes such as cyclists, motorists, and pedestrians through the installation of new bike signals, protected turn signals, and mast arm signals. Although project locations have not been selected yet, locations on the High Injury Network are prioritized for selection. |
| Need (Asset Useful Life) | When used in coordination with other projects to facilitate future signal upgrade work, new traffic signal conduits installed as part of this project would be replacing an asset that has reached the end of its useful life per industry accepted standards. |
| Signal Priority for Transit and/or Emergency Vehicles | Replacement of old signal conduits with new traffic signal conduits could allow for later Transit Signal Priority installation as part of a separate future project. |

| Project Name | Great Highway Signal Upgrades | | | | | | |
| Relative Level of Need or Urgency (time sensitive) | Need to proceed in proposed timeframe to enable construction coordination. | | | | | | |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | The design phase funds for this project was previously supported by the SFCTA CAC and the Transportation Board. | | | | | | |
| Benefits to Disadvantaged Populations and Equity Priority Communities | This project benefits all users of the Great Highway roadway through upgraded signal infrastructure rapidly reaching the end of its useful life due to unusually harsh conditions next to the ocean and improved safety through updated curb ramps, accessible pedestrian signals, and upgraded streetlighting. Accessible Pedestrian Signals that will assist visually impaired pedestrians will be added at the 8 main project intersections on Great Highway. Wheelchair users will also benefit from updated curb ramps at Great Highway/Lincoln and mid block crossings which will be updated with truncated domes and flat landings. | | | | | | |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes | | | | | | |
| San Francisco Transportation Plan Alignment (SFTP) | Safety and Livability The existing signals along Great Highway are prone to corrosion and failure due to the proximity of the ocean and wind, water and sun exposure. This project will replace all existing signal infrastructure including poles, signal heads, conduits and controllers. | | | | | | |

| | s criteria that are specific to each Expenditure Plan program. The questions that are r each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
|--|---|
| | 17- Traffic Signs and Signals Maintenance |
| Safety | This project benefits all users of the Great Highway roadway through upgraded signal infrastructure rapidly reaching the end of its useful life due to unusually harsh conditions next to the ocean and improved safety through updated curb ramps, accessible pedestrian signals, and upgraded street lighting. |
| Need (Asset Useful Life) | The existing signals along Great Highway are prone to corrosion and failure due to the proximity of the ocean and wind, water and sun exposure. This project will replace all existing signal infrastructure including poles, signal heads, conduits and controllers. |
| Signal Priority for Transit and/or Emergency Vehicles | If the budget allows, the project will implement signal priority for emergency vehicles. |

SFMTA submitted a Safe Streets and Roads for All (SS4A) federal grant application in July 2023 for a Tenderloin Community Safety Streets project, including part of the Tenderloin Signal Upgrade scope described in this PIF along with additional community-based proposals. If successful, the grant will be for \$8 million of the construction phase funds for the project. The schedule shown assumes a slightly longer construction schedule than typical non-Federal projects to assume the additional time needed to secure the federal grant funding.

Notes

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|--|
| Project Name | Tenderloin Signal Upgrade |
| Relative Level of Need or Urgency (time sensitive) | Tenderloin-based community organizations such as the Tenderloin Task Force have expressed their support for this project and encouraged SFMTA to move it forward in a timely manner. If federal funding is secured for this project, there will be further urgency to secure Proposition L funds in order to meet strict timely use of funds grant deadlines. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | SFMTA Streets staff has engaged the community through on-going outreach efforts for many years. As previously mentioned, the Tenderloin Task Force is one example of community based organization that has demonstrated their support for the Tenderloin Signals Upgrade project. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | This project benefits all users of roadways in the Tenderloin through safety improvements such as accessible pedestrian signals, new protected left-turn phasing, upgraded curb ramps, and upgraded streetlighting. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco Transportation Plan Alignment (SFTP) | Safety and Livability New APS units will provide safety benefits for visually-impaired users who can use them to assist in crossing signalized intersections. New left-turn phasing will provide safety benefits for roadway users by providing separation of movements for different modes of transportation. |

| | s criteria that are specific to each Expenditure Plan program. The questions that are each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
|--|--|
| | 17- Traffic Signs and Signals Maintenance |
| Safety | This project will improve safety through Proven Safety Countermeasures such as signal visibility and accessible pedestrian signal upgrades. Employing a Safe System Approach to create Safer Roads, Safer People, and Safer Speeds, this project will implement core traffic safety enhancements to improve pedestrian and bicyclist safety, connectivity, and accessibility, enhance transit connections, and activate community space. |
| Need (Asset Useful Life) | By analyzing the age of key signal hardware such as controller cabinets, conduits, wiring, and other signal equipment, a significant portion of equipment at these intersections in the Tenderloin have been found to be approaching the end of its useful life. This project will therefore replace most traffic signal assets. |
| Signal Priority for Transit and/or Emergency Vehicles | For locations getting full upgrades, this project will implement signal priority for transit/and or emergency vehicles. |

Map of Proposed Locations for Tenderloin Signal Upgrade

| | Project Name and Sponsor | | | | | | | |
|---|--|--|--|--|--|--|--|--|
| Project Name: | Traffic Sign Replacement Program | | | | | | | |
| Implementing Agency: | SFMTA | | | | | | | |
| | Prop L Expenditure Plan Information | | | | | | | |
| Prop L Program: | 17- Traffic Signs and Signals Maintenance | | | | | | | |
| Prop L Sub-Program (if applicable): | | | | | | | | |
| Other Prop L Programs (if applicable): | | | | | | | | |
| | Project Information | | | | | | | |
| Brief Project Description for MyStreetSF (80 words max): | Enhance traffic and pedestrian safety by replacing traffic signs that are reaching the e of their useful life and need to be upgraded to current retroreflective standards. Examples of signs expected to be replaced include advanced street name, fluorescen yellow-green school crossing, fluorescent yellow-green pedestrians crossing ahead, " Turn on Red", STOP, Speed Limit, "No Left/Right Turn," and "One Way." | | | | | | | |
| Project Location and Limits: | To be determined. Signs reaching the end of their useful life or need to be upgraded to current retro reflectivity standards, locations with collision histories, and locations in equity priority communities will be prioritized. | | | | | | | |
| Supervisorial District(s): | TBD | | | | | | | |
| <u>Is the project located on the</u> 2022 Vision Zero High Injury Network ? | Yes Is the project located in an Equity Yes Priority Community (EPC)? | | | | | | | |
| Which EPC(s) is the project located in? | To be determined, but due to the wide geographic distribution of locations that can be selected as part of this project, one or more equity priority communities will likely be selected as part of the final scope. | | | | | | | |
| Detailed Scope (may attach Word document): Please describe in detail the project scope, any planned community engagement, benefits, considerations for climate adaptation and resilience (if relevant), and coordination with other projects in the area (e.g. paving, Vision Zero). | Enhance traffic and pedestrian safety by replacing signs that are reaching the end of their useful life and need to be upgraded to the latest retro reflectivity standards. Type of signs expected to be replaced include regulatory, warning, guide, or school zone. Sign examples include advanced street name, fluorescent yellow-green school crossing, fluorescent yellow-green pedestrians crossing ahead, "No Turn on Red" (NTOR), STOP, Speed Limit, "No Left/Right Turn," and "One Way." This project will ensure that SFMTA can implement sign replacements in a timely and cost-effective manner. Final locations to be determined. Budget includes materials and SFMTA Sign Shop labor to install. In Fall 2021, the SFMTA posted NTOR signs at over 50 intersections in the busy Tenderloin district and the before/after study revealed that NTOR restrictions can keep crosswalks clear and reduce close calls on major intersections. Encouraged by the positive results of this evaluation, SFMTA wants to expand NTOR restrictions since it is a low-cost measure that can improve pedestrian safety. As part of this project, there will also likely be some replacement of existing NTOR signs with the latest graphic version of the signs. | | | | | | | |

Notes

Г

Detailed project schedules to be developed for this programmatic item as funds are allocated on a yearly basis. For typical allocation budget for one year, project schedule usually involves one to two months of design engineering and 10 months of implementation by SFMTA Sign Shop crews.

| Plea | Prop L Supplemental Information ise fill out each question listed below (rows 2-8) for all projects. |
|---|--|
| Project Name | Traffic Sign Replacement Program |
| Relative Level of Need or Urgency (time sensitive) | Project needs to proceed in proposed timeframe to order to maintain traffic signs in state of good repair. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | Although this project has not been specifically discussed with communities disproportionately impacted by discriminatory practices, the scope of this project is expected to be well-received as the final scope will likely include upgrading of signs at various communities throughout San Francisco. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | San Francisco's Vision Zero program is guided by core principles that reflect that traffic fatalities are preventable, and that traffic safety interventions will mitigate the likelihood that a collision results in death. By replacing key traffic signs that are reaching the end of their useful life with upgraded retro reflectivity, traffic sign visibility will be improved. Visible signs communicate with drivers, cyclists, pedestrians, etc. in a non-verbal way that keeps all roadway users safe. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco Transportation Plan Alignment (SFTP) | Safety and Livability The replacement of traffic signs is approaching the end of their useful life will improve safety for all roadway users as it help to keep them in state of good repair to allow them to be seen at their ideal visibility. |

| The next section includes criteria that are specific to each Expenditure Plan program. The questions that are required to be filled out for each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. | | | | | |
|--|--|--|--|--|--|
| | 17- Traffic Signs and Signals Maintenance | | | | |
| Safety | To help identify safety issues that can be addressed through this project, MTA staff will utilize TransBASE, an online database management system and analytical tool that facilitates a data-driven understanding of transportation-related safety issues. TransBASE currently includes over 200 spatially referenced variables from multiple agencies and across a range of geographic scales, including infrastructure, transportation, sociodemographic, and crash data, all linked to an intersection or street segment. TransBASE's purpose is to inform public and private efforts to improve transportation system safety. As an example, when SFMTA recently submitted a successful Highway Safety Improvement Program (HSIP) application, TransBASE was used extensively to identify locations with collision patterns that could be addressed with sign improvements. In the end, the data drive process led to the identification of the type and locations of signs to include for replacement including No Turn on Red, No Left Turn, One Way signs, and Do Not Enter signs. | | | | |
| Need (Asset Useful Life) | The key goals of this project are to replace traffic signs that are reaching the end of their useful life and need to be upgraded to current retroreflective standards. | | | | |
| Signal Priority for Transit and/or Emergency Vehicles | Since this project does not include any full signal upgrades, the budget does not allow for implementation of signal priority for transit/and or emergency vehicles. | | | | |

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|---|
| Project Name | Traffic Signal Hardware Replacement Program FY 24 |
| Relative Level of Need or Urgency (time sensitive) | The schedule of this project does not need to coordinate with other projects. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | Although this project has not been specifically discussed with communities disproportionately impacted by discriminatory practices, the scope of this project is expected to be well-received as the final scope will likely include upgrading of key signal hardware at various equity priority communities throughout in San Francisco. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | San Francisco's Vision Zero program is guided by core principles that reflect that traffic fatalities are preventable, and that traffic safety interventions will mitigate the likelihood that a collision results in death. By replacing key traffic signal hardware that are reaching the end of their useful life with upgraded equipment, safety for all roadway users will be enhanced. If key signal hardware are not replaced in a timely manner, they may fail unexpectedly and create a safety hazard for roadways users such as visually impaired pedestrians who rely on functioning APS units to cross signalized intersections or roadway users who rely on functioning traffic signals to provide clear right of way assignment. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| <u>San Francisco</u> <u>Transportation Plan</u> <u>Alignment (SFTP)</u> | Safety and Livability In addition to the safety benefits for roadway users previously noted, maintaining signals at a state of good repair would help to avoid unfortunate situations where the SFMTA Signal Shop crews have to respond to emergency repair situations which takes away time from their already full plate of maintenance duties and high priority work on other Vision Zero signal projects. |

| The next section includes criteria that are specific to each Expenditure Plan program. The questions that are required to be filled out for each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. | | | | | | |
|--|---|--|--|--|--|--|
| | 17- Traffic Signs and Signals Maintenance | | | | | |
| Safety | Based on assessment by the SFMTA Signal Shop, candidate locations for hardware replacement were identified based on known continuing maintenance issues and/or the presence of "legacy" technology that is no longer supported by manufacturers. Also, by analyzing the age of key signal hardware such as controller cabinets, vehicle signal detector, and pedestrian activated flashing beacons in the SFMTA's signal hardware inventory database, a significant portion of equipment is found to be approaching the end of its useful life. Failures for these key hardware components before in-house crews could replace them would certainly result in potential safety conflicts for roadway users. Final locations to be determined, but due to the wide geographic distribution of candidate locations that can be selected as part of this project, a significant number of locations are expected to be on the High Injury Network. | | | | | |
| Need (Asset Useful Life) | Yes | | | | | |
| Signal Priority for Transit and/or Emergency Vehicles | Since this project does include any full signal upgrades, the budget does not allow for implementation of signal priority transit/and or emergency vehicles. | | | | | |

| Prop L Program: | 17- Traffic Signs and Signals Maintenance | | | | | | | |
| Prop L Sub-Program (if applicable): | | | | | | | | |
| Other Prop L Programs (if applicable): | | | | | | | | |
| | Project Information | | | | | | | |
| Brief Project Description for MyStreetSF (80 words max): | Replace key signal hardware such as accessible (audible) pedestrian signals, signal controller cabinets, and battery backup system cabinets that are reaching the ends of their useful lives and/or needs to be upgraded to current industry standards. Replacing traffic signal hardware will help to maintain SFMTA's traffic safety assets in a state of good repair, which is critical to ensuring a safe and reliable transportation system. | | | | | | | |
| Project Location and Limits: | To be determined. Signal hardware reaching the end of their useful life or need to upgraded to current industry standards, locations with collision histories, and locations in equity priority communities will be prioritized. | | | | | | | |
| Supervisorial District(s): | TBD | | | | | | | |
| Is the project located on the 2022 Vision Zero High Injury Network ? | Yes Is the project located in an Equity Yes Priority Community (EPC)? Yes | | | | | | | |
| Which EPC(s) is the project located in? | To be determined, but due to the wide geographic distribution of locations that can be selected as part of this project, one or more equity priority communities will be likely be selected as part of the final scope. | | | | | | | |
| Detailed Scope (may attach Word document): Please describe in detail the project scope, any planned community engagement, benefits, considerations for climate adaptation and resilience (if relevant), and coordination with other projects in the area (e.g. paving, Vision Zero). | Enhance traffic and pedestrian safety by replacing key signal hardware that is reaching the end of its useful life and/or needs to be upgraded to current industry standards. Examples of signal hardware to be replaced include accessible (audible) pedestrian signals (APS), signal controller cabinets, and battery backup system (BBS) cabinets. Replacing traffic signal hardware will help to maintain SFMTA's traffic safety assets in a state of good repair, which is critical to ensuring a safe and reliable transportation system. Failure of key signal equipment such as APS, pedestrian countdown signals, or controller cabinets could put the most vulnerable roadway users such as senior and visually impaired pedestrians in jeopardy and create an emergency situation for repair. This project will ensure that SFMTA can implement signal hardware replacements in a timely and cost-effective manner. Final locations to be determined. Budget includes materials and SFMTA Sign Shop labor to install. | | | | | | | |
| Attachments: Please attach maps, drawings, photos of current conditions, etc. to support understanding of the project. | Attachment 1: Table 1 Controller Cabinet Replacements Attachment 2: Table 2 Vehicular Detection Replacements Attachment 3: Table 3 RRFB Replacements | | | | | | | |
| Type of Environmental Clearance Required: | Categorically Exempt | | | | | | | |
| Coordinating Agencies: Please list partner agencies and identify a staff contact at each agency. | This project is expected to be implemented by SFMTA in-house staff | | | | | | | |

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|--|
| Project Name | Traffic Signal Upgrade Contract 35 |
| Relative Level of Need or Urgency (time sensitive) | Needs to proceed in proposed timeframe to enable construction coordination |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | As part of the process for allocating Proposition K design phase funds for this project, the locations for this project were previously approved by the Community Advisory Committee and Transportation Authority Board. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | 8 out 22 project locations are in a Equity Priority Community that will benefit from safety improvements through signal upgrades. These locations include: 25th Avenue/Clement Street, 19th Street/Folsom Street, 21st Street/Folsom Street, 23rd Street/Folsom Street, Gough Street/Haight Street/Market Street, Holloway Avenue/Junipero Serra Boulevard, Alemany Boulevard/Sickles Avenue, and Larkin Street/Post Street. In particular, this project will provide significant benefits for pedestrians, especially those who are visually-impaired, through the addition of new pedestrian countdown signals (PCS) and accessible pedestrian signals (APS) at 20 out of 22 project locations. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco Transportation Plan Alignment (SFTP) | Safety and Livability This project will advance SFTP goals through signal visibility, pedestrian countdown signal, and accessible pedestrian signal upgrades. |
| | s criteria that are specific to each Expenditure Plan program. The questions that are r each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
| Safety | 17- Traffic Signs and Signals Maintenance The SFMTA has a more than 30 year successful track record on the effectiveness of traffic signal upgrades, decades before Vision Zero was adopted. Per a collision history report from 2001, signal upgrades in the SOMA that were completed in the mid 1990's have contributed to a more than 50% reduction in collisions. SFMTA's goal to install accessible pedestrian signals at 100% of the City's 1,285 signalized intersections (currently 38% are equipped) is a national model for other cities to follow, including New York City that was forced through litigation to comply. Transit signal priority has been installed at 38% of signalized intersections to improve reliability in concert with other improvements including leading transit signals (transit gets a green light before cars), red transit lanes, and queue jumps. Emergency vehicle preemption has been installed at 41% of signalized intersections, and intersections so equipped are located along preferred emergency response routes. Signal mast arms, larger conduits, and new controllers are critical components to the operation and success of protected/contraflow bike lanes. |

| Need (Asset Useful Life) | By analyzing the age of key signal hardware such as controller cabinets, conduits, wiring, and other signal equipment, a significant portion of equipment at these intersections have been found to be approaching the end of its useful life. This project will therefore replace a significant amount of traffic signal assets. |
|--|--|
| Signal Priority for Transit and/or Emergency Vehicles | For locations getting full upgrades, this project will implement signal priority for transit/and or emergency vehicles. |

| | Prop L Expenditure Plan Information | | | | | | |
| Prop L Program: | 17- Traffic Signs and Signals Maintenance | | | | | | |
| Prop L Sub-Program (if applicable): | | | | | | | |
| Other Prop L Programs (if applicable): | | | | | | | |
| | Project Information | | | | | | |
| Brief Project Description for MyStreetSF (80 words max): | Improve traffic signal visibility at 8 intersections by replacing 8-inch signal heads with 12- inch heads at locations with a history of red-light running collisions. Additionally, improve signal visibility at traffic signals at 20 intersections by installing signal backplates with yellow retroreflective borders at locations with prevailing speeds near or above 40 MPH or at locations where a major freeway segment terminates. These upgrades will focus on Vision Zero High Injury Network corridors and improve safety at signalized intersections throughout the city. | | | | | | |
| Project Location and Limits: | Candidate locations are provided in the attached tables. | | | | | | |
| Supervisorial District(s): | District 01, District 02, District 03, District 04, District 05, District 06, District 08, District 09, District 10, District 11 | | | | | | |
| Is the project located on the 2022 Vision Zero High Injury Network ? | Yes Is the project located in an Equity Yes Priority Community (EPC)? Yes | | | | | | |
| Which EPC(s) is the project located in? | Final locations to be determined, but due to the wide geographic distribution of candidate locations that can be selected as part of this project, one or more equity priority communities will be likely be selected as part of the final scope. Candidate locations are in the following equity priority communities: Tenderloin-SoMa, Western Addition, Oceanview- Ingleside, Bayview, Chinatown, and Excelsior-Outer Mission. | | | | | | |
| Detailed Scope (may attach Word document): Please describe in detail the project scope, any planned community engagement, benefits, considerations for climate adaptation and resilience (if relevant), and coordination with other projects in the area (e.g. paving, Vision Zero). | The scope of this project will upgrade signalized intersections by replacing 8-inch lens signal heads with 12-inch signal heads and by installing signal backplates with yellow retroreflective borders. 12-inch heads are the current standard per the California Manual on Uniform Traffic Control Devices (CAMUTCD). This project will prioritize upgrades to 12-inch signal heads at intersections in the Vison Zero High Injury Network that have a history of right angle collisions due to red light running, where signal visibility may be improved using existing traffic signal poles. Yellow reflective backplates are recommended based on CAMUTCD guidance and a Caltrans 2020 directive (Traffic Safety Bulletin 20-05). Upgrades to reflective backplates will focus on streets with prevailing speeds near or above 40 MPH or at locations where a major freeway mainline segment terminates, requiring deceleration from freeway speeds. | | | | | | |

| fatalities are preventable and that traffic safety interventions will mitigate the likeliho that a collision results in death. The project scope to upgrade traffic signals from 8-ir 12-inch signal heads along the High Injury Network and locations with a recurring hi of collisions will reduce the incidence of certain types of collisions. Larger traffic sign head lenses and signal backplates with yellow retroreflective borders are visually prominent to motorists at a greater distance, improves driver awareness, and can le a reduction in red-light running. The project will improve safety and help the City res a reduction in red-light running. The project locations with a severe injuries. The project als maintains the SFMTA's assets in a state of good repair which is critical to ensuring a and reliable transportation system.Preliminary assessment of potential project locations was conducted by identifying locations with existing 8-inch traffic signals and with a recent history of collisions correctable by signal visibility improvements. Further investigation identified locatio with speeds at or above 40 MPH or adjacent to Caltrans freeway segment terminuse Certain locations identified for reflective backplates will require 12-inch signal head replacement as well. This project will upgrade signals to 12-inch signal heads at approximately 8 intersections and will upgrade signals with yellow retroreflective backplates at approximately 20 intersections.Attachments: Please attach maps, drawings, photos of current conditions, etc. to support understanding of the project.Candidate locations are listed in the attached tables.Type of Environmental Clearance Required:Categorically ExemptCoordinating Agencies: Please list partner agencies and identifyThis project is expected to be implemented by SFMTA in-house staff< | | |

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|--|
| Project Name | Traffic Signal Visibility Upgrades Program FY24 |
| Relative Level of Need or Urgency (time sensitive) | This project does not need to be coordinated with another project. |
| | |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | Although this project has not been specifically discussed with communities disproportionately impacted by discriminatory practices, the scope of this project is expected to be well-received as the final scope will likely include upgrading traffic signal visibility at various equity priority communities throughout in San Francisco. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | San Francisco's Vision Zero program is guided by core principles that reflect that traffic fatalities are preventable, and that traffic safety interventions will mitigate the likelihood that a collision results in death. By improving signal visibility for traffic signal lights from 8-inch to 12-inch signal heads and adding retroreflective backplates, traffic signal heads would be more visually prominent at a greater distance to motorists and will likely lead to reduction of red-light runners, driver's indecisiveness, and serious right angle collisions. This project will improve safety for all roadway users including pedestrians with visual and mobility impairments and help the City reach its Vision Zero goal of eliminating all traffic fatalities and severe injuries. Candidate locations are in the following equity priority communities: Tenderloin-SoMa, Western Addition, Oceanview- Ingleside, Bayview, Chinatown, and Excelsior-Outer Mission. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco Transportation Plan Alignment (SFTP) | Safety and Livability These safety improvements will advance the City's Vision Zero goals by decreasing the likelihood of red-light running. |
| | |

| | s criteria that are specific to each Expenditure Plan program. The questions that are each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |

| Project Completion (means last eligible expenditure) | | | | | Q4-Apr- May-Jun | 2027/28 | |
| Notes | | | | | | | |

Detailed project schedules to be developed for this programmatic item as funds are allocated on a yearly basis. For typical allocation budget for one year, project schedule usually involves one to two months of design engineering and 10 months of implementation by SFMTA Signal Shop crews.

2029/30

Notes

Project Name:

Traffic Signal Visibility Upgrades Program FY25-28

| Plea | Prop L Supplemental Information se fill out each question listed below (rows 2-8) for all projects. |
|---|---|
| Project Name | Traffic Signal Visibility Upgrades Program FY25-28 |
| Relative Level of Need or Urgency (time sensitive) | It is critical to fund the upgrade of 8-inch to 12-inch signals on existing signal poles since it is one of the most cost efficient and relatively fastest signal related safety improvements that can be implemented by SFMTA. Since no excavation or construction is needed, the Signal Shop can install improvements on a rolling basis, one intersection at a time, once signal hardware has been procured. |
| Prior Community Engagement/Level and Diversity of Community Support (may attach Word document): | Although this project has not been specifically discussed with communities disproportionately impacted by discriminatory practices, the scope of this project is expected to be well-received as the final scope will likely include upgrading of traffic signals at various equity priority communities throughout in San Francisco. |
| Benefits to Disadvantaged Populations and Equity Priority Communities | San Francisco's Vision Zero program is guided by core principles that reflect that traffic fatalities are preventable, and that traffic safety interventions will mitigate the likelihood that a collision results in death. By approving the upgrade of traffic signal lights from 8-inch to 12-inch signal heads at multi-lane, 30 MPH or higher corridors and/or locations with a recurring history of right angle collisions, certain types of collisions may be reduced due to improved visibility of traffic signals. The traffic signal heads would be more visually prominent at a greater distance to motorists and may lead to reduction of red-light runners, reduce driver's indecisiveness and collisions. This project will improve safety and help the City reach its Vision Zero goal of eliminating all traffic fatalities and severe injuries. It will also maintain SFMTA's assets in a state of good repair which is critical to ensuring a safe and reliable transportation system. Aging infrastructure is often found in underserved areas of the City such as Chinatown, Western Addition, Tenderloin, etc. |
| Compatibility with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco | Safety and Livability |
| Transportation Plan | |
| <u>Alignment (SFTP)</u> | In addition to the safety benefits for roadway users previously noted, maintaining signals at a state of good repair would help to avoid unfortunate situations where the SFMTA Signal Shop crews have to respond to emergency repair situations which takes away time from their already full plate of maintenance duties and high priority work on other Vision Zero signal projects. |

| | s criteria that are specific to each Expenditure Plan program. The questions that are r each program will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
|--|---|
| | 17- Traffic Signs and Signals Maintenance |
| Safety | The SFMTA has a more than 30 year successful track record on the effectiveness of traffic signal upgrades, decades before Vision Zero was adopted. Per a collision history report from 2001, signal upgrades in the SOMA that were completed in the mid 1990's have contributed to a >50% reduction in collisions. Final locations are to be determined for this project but are anticipated to include a significant number of locations on the High Injury Network. |
| Need (Asset Useful Life) | Yes |
| Signal Priority for Transit and/or Emergency Vehicles | N/A |

The SS4A overall Project budget is \$22,016,605, with the signal scope budget of \$17,941,605 and the speed management scope budget of \$4,075,000. A 20% local match of \$4,403,321 (for design and construction phases) was required for the full scope in the grant application. Prop L funds, requested at \$3,589,000, would be used for the local match to the signal scope of the project. No Prop L funding is expected to be used for the local match for the speed reduction scope which SFMTA expects to fund with Proposition B General Funds.

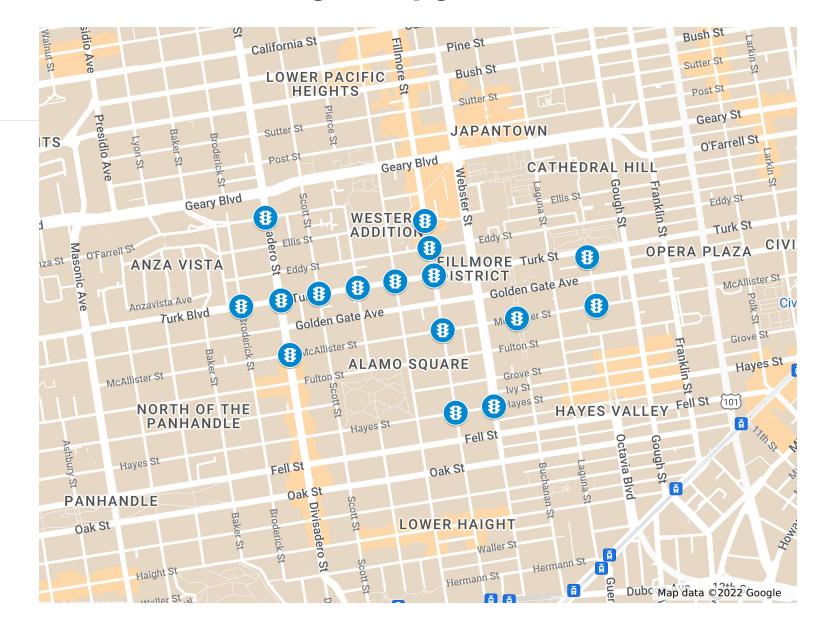

| | Prop L Supplemental Information |
|--|--|
| | Please fill out each question listed below (rows 2-8) for all projects. |
| Project Name | Western Addition Area Traffic Signal Upgrades Phase 2 |
| Relative Level of Need or Urgency (time sensitive) | The Western Addition Community Safe Streets (WACSS) project was selected for \$17,613,284 in Safe Streets and Roads for All (SS4A) federal funding in January 2023. As part of the grant requirements, a local match of \$4,403,321 is required from Proposition L. There is urgency to secure Proposition L funds in order to meet strict timely use of funds grant deadlines. Please note that this PIF is for Prop L local match needed for the signal scope which is \$3,588,321. Note that no Prop L funding is expected to be used for the local match for the speed reduction scope and SFMTA expects to use separate funding from Proposition B Population Growth. |
| Prior Community | As part of the process for allocating the Proposition L local funds for design and construction for this project, |
| Engagement/Level and Diversity of Community Support (may attach Word document): | the locations for this project will be presented to the Community Advisory Committee and Transportation Authority Board. In 2017, the SFMTA led the Western Addition Community Based Transportation Plan (WA CBTP) to identify transportation challenges and recommend solutions to improve mobility and access within the neighborhood. Through extensive community engagement, the Plan identified a series of recommendations to create a safer, more accessible, and livable Western Addition. The Project will implement many of those recommendations. |
| Benefits to Disadvantaged | 14 out of 16 of the project locations are in a Equity Priority Community that will benefit from safety |
| Populations and Equity Priority Communities | improvements through signal uprades and speed reduction strategies. These locations include: Broderick/Turk, Divisadero/Turk, Divisadero/O'Farrell, Scott/Turk, Pierce/Turk, Steiner/Turk, Fillmore/Turk, Fillmore/McAllister, Eddy/Fillmore, Hayes/Webster, Buchanan/McAllister, McAllister/Octavia, Octavia/Turk, and Ellis/Fillmore. |
| Compatability with Land Use, Design Standards, and Planned Growth | Yes |
| San Francisco | Safety and Livability |
| Transportation Plan Alignment (SFTP) | |
| Aighnent (JETE) | This project will improve safety through signal visibility, pedestrian signal upgrades, and speed reduction strategies. |
| | criteria that are specific to each Expenditure Plan program. The questions that are required to be filled ogram will auto-populate once the Prop L program is selected on the Scope & Schedule tab. |
| | 17- Traffic Signs and Signals Maintenance |
| Safety | This project will improve safety through Proven Safety Countermeasures such as signal visibility and pedestrian signal upgrades. Employing a Safe System Approach to create Safer Roads, Safer People, and Safer Speeds, this project will implement core traffic safety enhancements to improve pedestrian and bicyclist safety, connectivity, and accessibility, enhance transit connections, and activate community space. |
| Need (Asset Useful Life) | By analyzing the age of key signal hardware such as controller cabinets, conduits, wiring, and other signal equipment, a significant portion of equipment at these intersections in the Western Addition have been found to be approaching the end of its useful life. This project will therefore replace most traffic signal assets. |
| Signal Priority for Transit and/or Emergency Vehicles | For locations getting full signal upgrades, this project will implement signal priority for transit/and or emergency vehicles. |

Western Addition Community Safe Streets Project

USDOT 2022 Safe Streets and Roads for All (SS4A) Grant Application Applicant: San Francisco Municipal Transportation Agency DUNS Number: 95-661-7435 Representative: Joel Goldberg, Manager, Programming and Grants

Jurisdiction: City of San Francisco, California Total Project Cost: \$22,016,605 USDOT (2022) SS4A Grant Request: \$17,613,284 Total Non-federal Funding (match): \$4,403,321

Western Addition Community Safe Streets Project

Overview

The Western Addition Community Safe Streets Project (the Project) will improve traffic safety outcomes and increase connectivity in the Western Addition. The San Francisco Municipal Transportation Agency (SFMTA) is requesting \$17,613,284 in SS4A funds to deliver core safety improvements identified in the Western Addition Community Based Transportation Plan (WA CBTP) and implement speed management strategies throughout the neighborhood to reduce crashes and help San Francisco achieve its Vision Zero goals of zero traffic deaths.

The Western Addition Neighborhood

At the center of San Francisco, the Western Addition is a residential neighborhood located east of Golden Gate Park and west of City Hall. This neighborhood is home to many low-income housing residents and a large minority community. These characteristics, in combination with San Francisco's high cost of living, led to the Western Addition's classification as an <u>Equity Priority Community¹</u> by the Metropolitan Transportation Commission (MTC), the Bay Area Region's MPO.

Home to two culturally significant and historic commercial centers – the Fillmore District and Japantown – the Western Addition's central location and points of interest draw thousands of residents, workers, and visitors. Annual cultural events like the Fillmore Jazz Festival and the Cherry Blossom Festival bring more than 200,000 people at a time to the neighborhood. The high volumes of people walking, biking, and taking transit in the Western Addition emphasize the need for safe and connected streets.

Delivering Recommendations from the Community Based Transportation Plan

In 2017, the SFMTA led the <u>Western Addition Community Based Transportation Plan</u> (WA CBTP) to identify transportation challenges and recommend solutions to improve mobility and access within the neighborhood. Through <u>extensive community engagement</u>, the Plan identified a series of recommendations to create a safer, more accessible, and livable Western Addition. Key near-term recommendations have already been implemented and WA CBTP Phase I improvements have completed the design phase and will start construction in 2023 (see Map 4, Appendix). SS4A funds will enable the completion of the WA CBTP and expand speed management strategies.

Location

The project area extends over seven census tracts in San Francisco bounded by Geary Blvd to the North, Oak St to the South, Van Ness Ave to the East and Baker St to the West. In 2019, there were 27,919 residents in the project area. The Western Addition is primarily a residential neighborhood with some blocks having a mix of residential, institutional, and commercial uses. The neighborhood's main commercial corridor is the six blocks of Fillmore Street between Geary Blvd and McAllister St.

As identified in the WA CBTP, the neighborhood experiences high vehicle speeds and cut through traffic and most of the project area's streets are on the Vision Zero High-Injury Network. Key streets/intersections in the City's High-Injury Network, which defines the 13% of streets that make up

¹ https://mtc.ca.gov/planning/transportation/access-equity-mobility/equity-priority-communities

75% of severe and fatal crashes, are Divisadero and Fillmore streets (North-South) and Turk and McAllister streets (East-West).

Location of Safety Improvements

The Project proposes traffic signal upgrades and other safety strategies at 16 intersections and along three corridors, which were identified by the local community in the WA CBTP. Fifteen of the 16 intersections are on the Vision Zero High-Injury Network and ten of the 16 intersections are in Underserved Communities Census Tracts (Historically Disadvantaged Communities). (See map below and Map1, Appendix).

Western Addition Community Safe Streets Project Location Map

The Project will improve traffic safety outcomes and increase connectivity in the Western Addition by delivering core safety improvements identified in the WA CBTP and implement speed management strategies. The proposed safety improvements and Safe Street Strategies are described below.

Traffic Signal Upgrades for Safer Intersections: larger 12-inch signal heads and mast arms to enhance signal visibility and pedestrian signal improvements, including pedestrian countdown signals, accessible pedestrian signals, updated signal timing such as leading pedestrian intervals (LPIs), pedestrian activated flashing beacons, radar speed signs, and upgraded curb ramps

Speed Reduction with Speed Management Strategies, including new 20 MPH speed limits on eligible corridors, radar speed signs, and quick-build projects.

Speed limits will be reduced to 20 MPH based on new California state criteria, established by California Assembly Bill 43.

Radar speed signs will be installed at locations selected based on community input, history of speeding, and opportunities for coordination around other existing safety improvement projects. The SFMTA will install up to 5 radar speed signs along arterial streets in the Western Addition.

Quick-Build safety improvements are reversible, adjustable traffic safety improvements that can be installed quickly while also working on comprehensive longer-term street changes for major capital projects. Typical quick-build improvements include low-cost treatments such as paint, signs, delineators, signal timing changes, parking and loading changes, and transit stop changes. As indicated in the map above, and on Map 2, Appendix, potential locations identified in the WA CBTP and on the Vision Zero High-Injury Network include Golden Gate Avenue from Gough to Divisadero, Turk Street from Gough to Divisadero, and O'Farrell Street between Steiner and Fillmore.

A neighborhood-wide multilingual education and outreach campaign to increase awareness, build support, and promote a culture that prioritizes traffic safety. A broader citywide campaign will be launched to capture residents, workers, and visitors who travel through the Western Addition.

Selection Criteria

Safety Impact

Defining the Safety Problem

The high volumes of people walking, biking, and riding transit emphasize the need for safe and connected streets. Pedestrians in the Western Addition face transportation connectivity challenges due to the lack of pedestrian countdown signals (PCS) and/or accessible pedestrian signals (APS) at numerous intersections.

The WA CBTP and 2017-2021 crash data show that the Western Addition experiences high vehicle speeds and cut through traffic. The City's High-Injury Network – which defines the 13% of streets that make up more than 75% of severe and fatal crashes—runs through the entire project area.

Between 2017 and 2021, the Western Addition experienced 8 fatal crashes (6 of them or 75% vehicle/pedestrian) and 51 severe injury crashes (14 of them or 27% vehicle/pedestrian) (see Map 3, Appendix). Speeding in the Western Addition and throughout San Francisco remains the main crash factor for severe and fatal crashes. Reducing vehicle speed is fundamental to safer streets, so the Project prioritizes speed management and speed reduction to design for speeds that protect human life.

Analysis of police and hospital crash data indicates that the Western Addition is home to vulnerable road users, such as <u>seniors and people with disabilities</u>, who typically travel to nearby senior centers, public libraries, churches, and public health facilities (see Map 1, Appendix). **Between 2017 and 2021, the Western Addition experienced 2 fatal crashes (all of them or 100% vehicle/pedestrian) and 3 severe injury crashes (2 of them or 66% vehicle/pedestrian) of residents 65 and older (see Map 3, Appendix).**

Safety Impact Assessment

The Project will enhance pedestrian and bicyclist safety, transit connections and community space, and implement the City's Vision Zero goals through both upgraded signals and speed reduction strategies.

The **traffic signal upgrades** include pedestrian countdown signals (PCS), accessible pedestrian signals (APS), and/or signal visibility improvements at 12 intersections, pedestrian activated flashing beacons at 3 intersections, and a radar speed sign approaching one intersection with existing pedestrian activated flashing beacons in the Western Addition. The 16 locations have been selected primarily due to safety

concerns identified by the Western Addition community in the WA CBTP. Signal and ancillary intersection improvements at each location will include installation of some or all of the following: pedestrian countdown signals (PCS), accessible (audible) pedestrian signals (APS), larger 12-inch signal heads relocated for maximum visibility, mast arms, updated signal timing such as leading pedestrian intervals, curb ramps, additional streetlighting, new poles, conduits, traffic detection, and signal interconnect as needed. Improvements at locations selected for upgraded flashing beacons will include new technology (i.e., rapid flashing beacons) and upgraded curb ramps as needed.

Research has shown that signal upgrades improve safety for pedestrians, motorists, and other roadway users. Studies confirm the effectiveness for improving safety from several of the signal treatments proposed as part of the Project. Research has shown that pedestrian countdown signals have reduced overall traffic crashes (8%), rear end crashes (8%), and pedestrian crashes (9%).² Research has also found that accessible pedestrian signals improved crossing performance by blind and sighted pedestrians and the use of rectangular rapid flashing beacons increases drivers yielding to pedestrians.³

Signal visibility upgrades can improve safety for pedestrians by reducing the likelihood of right-angle crashes due to improved visibility of traffic signals. Larger traffic signal heads are more visually prominent at a greater distance to motorists and may also lead to reduction of red-light running. Reducing red-light running and right-angle crashes will promote pedestrian safety, given that nearby or crossing pedestrians are often the most innocent of victims in these types of crashes. Studies show a reduction in crashes for drivers 25 to 64 years old (17%) and for drivers 65 and older (34%) with repositioning of traffic signals for better visibility and use of 12-inch signal lenses.⁴

Additionally, the Project will implement **speed management improvements** with the goal of reducing vehicle speeds. Speeding is the leading cause of severe injuries and fatalities in San Francisco. These speed management strategies are identified as key tools in the City's <u>Vision Zero Action Strategy</u>. Beginning in 2024, <u>AB43⁵</u> will also allow San Francisco to lower speeds by 5 MPH on streets that are designated as "safety corridors". The SFMTA plans to **reduce speed limits from 25 MPH to 20 MPH on up to 25 eligible "safety corridors"** in the Western Addition.

The improvements also include up to 5 speed radar signs to increase awareness of speeds, up to 2 corridor level road diets/quick-build projects, and multilingual education and outreach campaigns at both the neighborhood and city level.

Lowering speeds by even 5 MPH from 25 to 20 significantly increases the likelihood of a person surviving a crash. Compared to the 20% chance of survival someone has being struck by a vehicle traveling 40 mph, a person has a 90% chance of surviving being struck by a vehicle going 20 mph. Lower speed limits make streets safer for all users.

⁵ Lowering speeds by even 5 MPH from 25 to 20 significantly increases the likelihood of a person surviving a crash.

² R. Srinivasan, B. Lan, D. Carter, S. Smith, K. Signor, and B. Persaud. "Safety Evaluation of Pedestrian Countdown Signals," Research, Development, and Technology Turner-Fairbank Highway Research Center, McLean, VA, (2019). ³Zegeer, C., R. Srinivasan, B. Lan, D. Carter, S. Smith, C. Sundstrom, N. Thirsk, C. Lyon, B. Persaud, J. Zegeer, E. Ferguson, and R. Van Houten. "Development of Crash Modification Factors for Uncontrolled Pedestrian Crossing Treatments," National Cooperative Highway Research Program, Research Report 841, Washington, D.C., (2017). ⁴ Morena, D. A., Wainwright, W. S., and Ranck, F., "Older Drivers at a Crossroads." Public Roads, Vol. 70, No. 4, Washington, D.C., FHWA, (2007) pp. 6-15.

The **up to 5 radar speed signs** will warn drivers to be conscientious and ensure they stay safely within the speed limit, encouraging drivers to comply with the speed limit. Radar speed signs are proven to be effective in urban roads, showing statistically significant reductions in observed 85th percentile speeds.⁶

The Project will implement **up to 2 corridor level road diets/quick-build projects** in the Western Addition. Projects will be designed and implemented with additional community engagement. Quickbuild projects, such as low-cost and temporary treatments like paint, signs, and delineators, signal timing changes, parking and loading changes, and transit stop changes, are proven to be effective in reducing speeds. For example, severe speeding decreased after the <u>Taylor Street Quick-Build Project</u> in San Francisco. The Taylor Street project included: lane reduction with new turn pockets, painted safety zones, wide loading lanes and parking buffers, and left turn restrictions. Vehicles traveling over 30 MPH decreased by 31%, while vehicles traveling over 40 MPH decreased by 94%. In the west crosswalk at Taylor and Ellis streets, the number of vehicles yielding to pedestrians during the morning peak increased by 58% and close calls dropped from 14 to 0. Additionally, the number of vehicles yielding to pedestrians increased by an average of 25% at the intersections of Taylor and Ellis streets and Taylor and Geary streets.

Underpinning the Project to improve traffic safety and connectivity in the Western Addition will be a **multilingual education and outreach campaign.** These communication strategies are cost-effective ways to reach large members of the public to increase awareness, build support, and promote a culture that prioritizes traffic safety. Applying behavioral science and identifying target audiences will inform messaging and marketing strategies. On-the-ground outreach, high-visibility marketing such as transit shelter ads and light pole banners, and geo-fencing digital advertising strategies will target the campaign to the Western Addition and other key neighborhoods. <u>Evaluation</u> of previous projects combining capital work with education show increased awareness and extended improvements in safer driving behaviors such as slower speeds.

Equity, Engagement, and Collaboration

The Western Addition is a cultural asset which has served as a historic center of San Francisco's Black community. Approximately, 20% of San Francisco's Black population resides within the Western Addition. In 2002, the MTC identified the Western Addition as an <u>Equity Priority Community</u> with a high concentration of low-income housing and a large population of minority residents challenged with the City's high cost of living. The long-term goal is to improve this community's transportation options and connectivity, while the near-term goal is to further deliver safety improvements.

In 2015, as part of the <u>WA CBTP</u>, the SFMTA conducted extensive <u>outreach</u> efforts in the Western Addition. In developing the WA CBTP, the SFMTA collaborated closely with the MTC, San Francisco County Transportation Authority, the City's Public Works and Planning departments, and the Board of Supervisors. The SFMTA also worked with community-based organizations (CBO) such as Walk San Francisco and Lighthouse for the Blind and Visually Impaired. In addition to the community input, the project team received guidance from the District 5 Supervisor and received additional support from the project's Technical Advisory Committee.

⁵Veneziano, D.; Ye, Z.; Westoby, K.; Turnbull, I.; Hayden, L., "Guidance for Radar Speed Sign Deployments." Transportation Research Board, (2012).

The project team partnered with a CBO, Mo'Magic, (<u>http://momagic.org/</u>)⁷ to collaborate with community members to identify transportation challenges and solutions. The CBO connected the project team with diverse community groups throughout the neighborhood and facilitated workshops at senior centers, elementary schools, and community centers to obtain a broad understanding of the community's transportation challenges and their ideal solutions. The project team incorporated community input on how to enhance pedestrian safety, transit connections and community space in the development of streetscape recommendations.

The signal improvements and the speed management strategies are both outcomes of that community engagement process, which identified speeding vehicles and high speeds as key concerns. Ten of the 16 intersections planned for signal upgrades are in <u>Underserved Communities Census Tracts (Historically</u> <u>Disadvantaged Communities</u>) (see Map 1, Appendix).

Traffic safety education and outreach campaign materials will be available in multiple languages. Multilingual ambassadors will be engaged in direct outreach to speak with residents, merchants, workers, and visitors in the Western Addition. The Project will fund 5 to 10 local community organizations, who already invest and maintain strong relationships in the Western Addition and surrounding neighborhoods, to deepen outreach and engagement to the neighborhood and vulnerable road users such as seniors and people with disabilities.

The SFMTA will inform residents, merchants, and workers along any new safety corridors with reduced speed limits just before or following installation of signage. Speed limit reductions go through a public hearing and legislation process to allow community feedback. Outreach will include distribution of multilingual paper collateral and in-person conversations while distributing information or participation in local community events.

Effective Practices and Strategies

In 2014, the City and County of San Francisco adopted <u>Vision Zero</u>, a policy with the goal of eliminating all traffic fatalities and reducing severe injuries. This **Safe System Approach** centers human life and coordinates across city departments to implement a suite of actions prioritizing street safety. Through the WA CBTP, the community identified speeding vehicles, high speeds, and pedestrian walkability as key concerns to be addressed. This project addresses safety issues in the community using proven tools within the Safe System Approach to slow speeds and create safer crossings.

SAFE STREETS: Excessive vehicle speed, inadequate visibility between travelers, and intersection conflicts all increase the likelihood of a crash that results in a severe injury or fatality. The Project will reduce speeds, improve visibility of traffic signals, and create safer crossings with fewer intersection conflicts. Strategies include the following:

Pedestrian countdown signals (PCS) and/or signal visibility improvements at 13 intersections and pedestrian activated flashing beacons at 3 intersections. The 16 locations have been selected primarily due to safety concerns.

⁶The MAGIC (Mobilization for Adolescent Growth In our Communities) initiative was founded in 2004 by the Office of the Public Defender in response to a community-identified need to address the impact of trauma, poverty, and violence on children and youth in targeted San Francisco districts.

Signal improvements are cost effective when considering benefit to cost ratio factors. Although the overall total cost of signal improvements proposed as part of the Project are significant due in large part to elements such as curb ramps, underground conduits, and poles that require extensive excavation and/or design, individual elements in the signal scope have relatively lower costs such as leading pedestrian intervals (LPIs), other signal timing updates, pedestrian countdown signals, accessible pedestrian signals, and larger 12-inch signal head lenses.

Additionally, Safe Street actions include **speed management improvements** with the goal of slowing vehicle speeds, namely 20 MPH speed limit signage on "safety corridors", as authorized by <u>AB43</u>, up to 5 speed radar signs, and up to 2 corridor level road diets/quick-build projects (may include traffic signal retiming). These improvements will address the following safety issues:

- Lower speed limits slow vehicle speeds to reduce the likelihood of a severe or fatal crash between road users
- Quick-Build corridor projects using tools such as lane reductions / road diets, parking buffers, and painted safety zones can reduce speeds and reduce the likelihood of a crash

SAFE PEOPLE: Paired with street redesign and other traffic safety tools, Safe People actions create a culture that prioritizes traffic safety by raising awareness of the need for safer streets, reducing barriers to adopting safer driving behaviors, and creating traffic safety champions. Through this project, these improvements will address the following safety issues:

- Multilingual education and outreach campaigns increasing awareness of the impacts of speed and new speed limits set in the neighborhood can promote safer driver behavior
- Speed radar signs high-visibility sharing information about the current speeds of drivers can increase awareness of speed limits and promote safer driver behavior such as slower speeds

DATA SYSTEMS: Using the <u>SFMTA's Safe Streets Evaluation Program</u>⁸, we will evaluate the effectiveness of the Project by identifying evaluation metrics, collecting data (pre- and post-project), performing analysis, and reporting back through blog posts, fact sheets, and/or evaluation summary reports posted on the SFMTA's website. Traffic safety data generated by the Project, and lessons learned in its implementation will also be posted on the SFMTA's website. The Project baseline and post-project evaluation will use <u>TransBASE</u>, an online database management system and analytical tool developed by the San Francisco Department of Public Health (SFDPH) in collaboration with multiple city agencies to facilitate a data-driven understanding of transportation-related safety issues. TransBASE currently includes over 200 spatially referenced variables from multiple agencies and across a range of geographic scales, including infrastructure, transportation, zoning, sociodemographic, and **crash data, all linked to an intersection or street segment**. TransBASE's purpose is to inform public and private efforts to improve transportation system safety, sustainability, community health and equity in San Francisco.

⁷For a detailed description of the evaluation process, check the <u>SFMTA's Safe Streets Evaluation Program</u> and <u>Handbook</u>.

Applying cost effective strategies such as paint, signage, and education campaigns in addition to other proven safety countermeasures will deliver core safety improvements and help slow speeds in the Western Addition.

Climate, Sustainability, and Economic Competitiveness

The Project furthers San Francisco's goals to adapt to Climate Change, become more sustainable and ensure continued economic competitiveness by providing Safe Streets that encourage walking and biking. The City's safety, climate, and transportation policies work together towards achieving that goal. In addition, the SFMTA's procurement policies ensure contractors hire economically disadvantaged San Francisco residents.⁹

- <u>Vision Zero SF</u> commits citywide resources to eliminate traffic fatalities, the vast majority of which are due to interactions between motorized vehicles and pedestrians and cyclists. **Reducing car travel and car speeds will greatly reduce injuries and deaths on our roads.**
- The <u>SFMTA 2021-2024 Strategic Plan</u> includes a goal of a transportation system that combats climate change, mitigates pollution and CO2 emissions from transportation and supports the resiliency and adaptation of the City's infrastructure **by increasing use of transit, walking and bicycling**.
- The <u>2021 San Francisco Climate Action Plan</u> charts a pathway to achieve net-zero greenhouse gas emissions while **addressing racial and social equity, public health, economic recovery, and resilience**. Transportation and land use is the largest contributor to San Francisco's emissions, accounting for 47% of the City's total greenhouse gas emissions. Strategies for reducing transportation emissions outlined in the Plan include **creating a well-connected transportation network that shifts trips from automobiles to walking, biking, and other active transportation modes** so that at least 80% of all San Francisco trips are low-carbon trips by 2030.

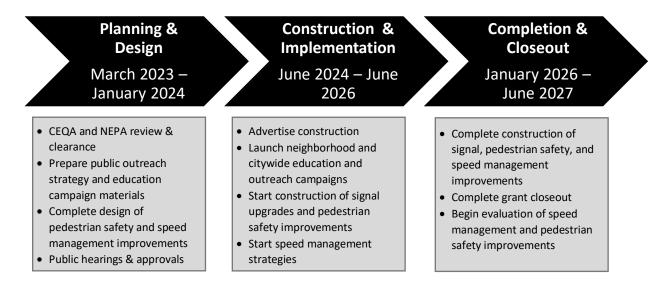

Project Readiness

The Project timeline and budget is informed by more than 30 years of experience successfully implementing signal upgrade projects funded by a San Francisco voter approved sales tax and more recent experience with implementing speed management programs. The SFMTA's expertise, experience, and technical capabilities ensure that all components of the Project will be completed within five years. The design phase for the Project's signal improvements started in August 2021 and is currently at 20% design. Preliminary engineering design work has already begun, ensuring that the project can be obligated within 12 months and completed well within five years. In fact, by the time SS4A grant funds

⁸ The SFMTA ensures equal employment opportunities on federally funded construction contracts. By requiring contractors to adhere to federal requirements, the SFMTA will meet minority and female participation goals pursuant to Executive Order 11246. Additionally, the SFMTA implements San Francisco's First Source Hiring Program, requiring developers, contractors, and employers to make good faith efforts toward employing economically disadvantaged San Francisco residents for entry level positions on applicable projects. With respect to procurement, the SFMTA implements the Department of Transportation's Disadvantaged Business Enterprise (DBE) Program as set forth in 49 CFR Part 26 on our FTA-funded contracts. Pursuant to a DBE Program Waiver, the SFMTA establishes African American and woman-owned DBE goals on construction contracts and woman-owned DBE goals on professional services contracts, inclusive of planning, environmental, and design contracts. The agency also establishes race-neutral Small Business Enterprise (SBE) goals that provide additional opportunities for economically- and socially disadvantaged firms on all contracts.

are obligated, the SFMTA will be at 40% design. The SS4A grant will fund the remaining 60% of the design phase and all the construction phase for the Project. Based on the typical schedule for obligating funds and assuming no unforeseen delays in the process, the SFMTA can obligate funds within 12 months after execution of the grant agreement.

The proposed project schedule is as follows:

Environmental Clearance Timeline

The Project will require both California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) environmental reviews. The SFMTA expects all CEQA and NEPA review for traffic signal upgrades¹⁰ and the advertising of the construction contract in 2024. The SFMTA has obtained environmental clearance which will be paid for by local funds that have already been allocated for the Project.

The State is expanding the 20 MPH authority to "safety corridors" beginning in 2024. Once the criteria are finalized, the project team will begin the legislation and public hearing process in 2024. About 25 corridors will be eligible for speed limit reductions as safety corridors in the Western Addition – which can be completed within approximately 1 year. Speed limit reductions do not require full environmental clearance and can be approved with a categorical exemption or exclusion. Quick-build projects are generally statutorily or categorically exempt from CEQA, which will be confirmed and completed before

⁹ The SFMTA anticipates initiating CEQA clearance with the SFMTA and San Francisco Planning divisions in late 2022 for the signal scope and anticipate receiving clearance by early 2023. The SFMTA anticipates initiating work with Caltrans' Local Assistance Program to apply for NEPA clearance/assignment in early 2023 for the signal scope of the Project. In reviewing and approving projects under NEPA, Caltrans is responsible for complying with all applicable federal environmental laws and with FHWA NEPA regulations, policies, and guidance, and is legally responsible and liable for the environmental decisions made on projects under NEPA Assignment. NEPA Assignment does not change federal environmental protection standards. NEPA Assignment has resulted in documents being approved in less time; improved the efficiency in which Caltrans prepares, reviews, and approves environmental documents; improved the quality of documents; and provides for greater accountability through monitoring. The SFMTA expects to achieve NEPA clearance through Caltrans by mid to late 2023.

each project is approved. Planning, design, and construction for radar speed signs requires approximately 12-24 months. Once the locations are finalized, environmental clearance as a categorical exemption/exclusion and legislation will follow. Construction will be completed within 6-24 months after legislation is complete.

Local Matching Funds

The overall Project budget is estimated to be \$22,016,605, with the signal scope budget of \$16,941,602 and the speed management scope budget of \$4,075,000. The SFMTA will provide a 20% local match of \$4,403,321, with funds provided by the <u>Proposition K</u> local transportation sales tax (see attached letter of commitment from the San Francisco County Transportation Authority, the agency authorized to administer and program the sales tax revenue). The local funds already allocated to date will not count towards the 20% local match requirement for the Project grant.

Funds in Underserved Communities

The Project expands over seven census tracts in San Francisco, comprising 27,919 persons. Of these, three census tracts are Historically Disadvantaged Areas, comprising 12,734 persons or 45.3 percent of the project area population (see Map 1, Appendix).

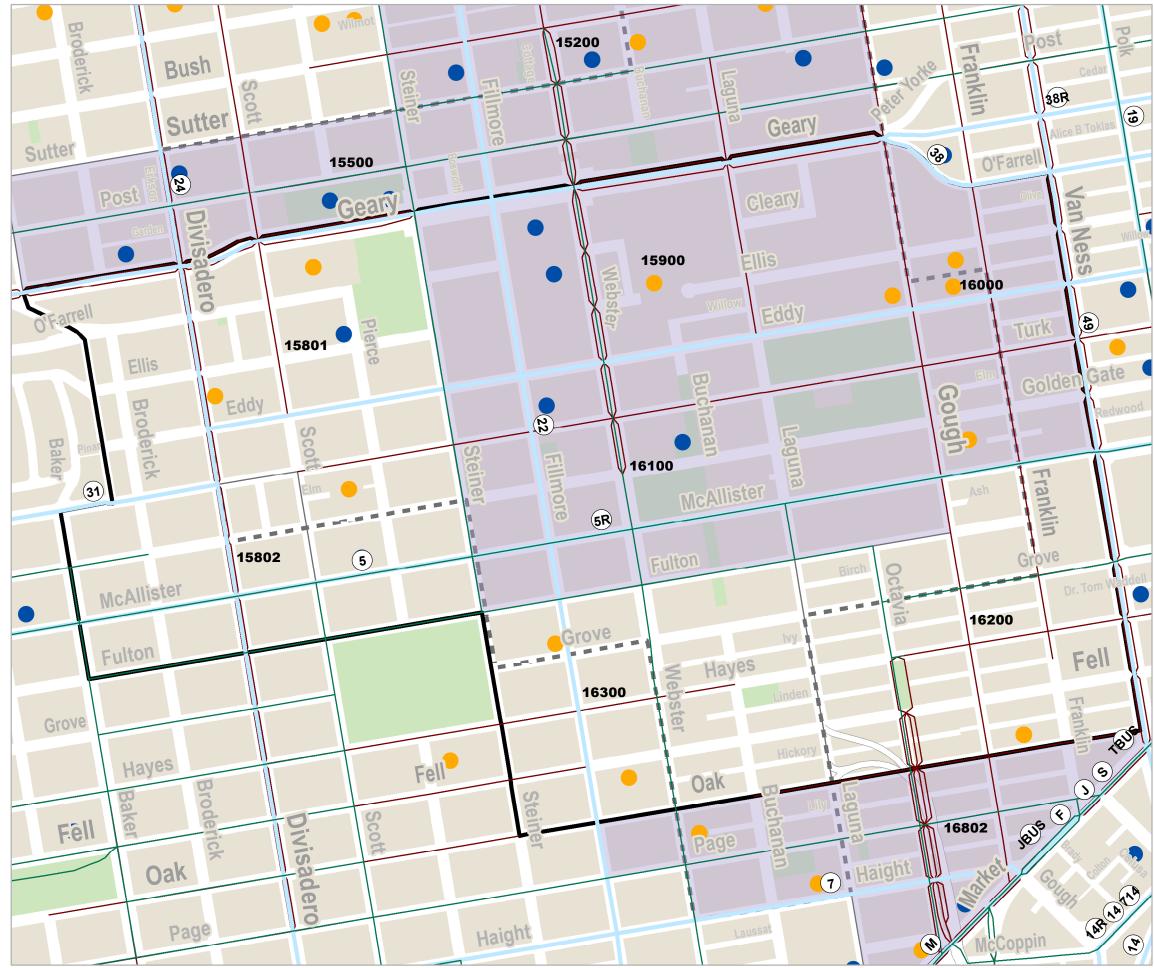

Evaluation Method/Data

For overall project impact on safety, the project team will use TransBASE to analyze the baseline and post-project conditions. Metrics under consideration for use include vehicle/pedestrian fatal and severe crashes, the primary crash factors involved (e.g., speeding or red-light running) in vehicle/pedestrian crashes, and right-angle crashes since these types of crashes are likely correctable by signal visibility improvements. Other metrics data under consideration for use in measuring project effectiveness include streetlighting illumination and vehicles properly stopping ahead of crosswalks during the red-light intervals.

Changes in speeds will be evaluated using data obtained through TransBASE, as well as through data collected on a sample of corridors where speed limits are reduced. This data will include 85th percentile speeds to understand how speeds have changed since the project was implemented. Data collection will help to refine future speed limit reduction projects. Additional metrics will be collected for other project components, such as people directly and digitally reached through the education and outreach campaign.

Using this data, the project team will be able to: inform opportunities to refine a project's design; communicate the effects of a project to the public, decision makers and other transportation professionals; support the use of design treatments at other locations and streamline the design of future projects that incorporate similar elements.

September 15, 2022

Peter Buttigieg Secretary of Transportation Department of Transportation 1200 New Jersey Avenue, SE Washington, D.C. 20590

Re: 2022 San Francisco Municipal Transportation Agency Safe Streets and Roads for All Grant Application

Dear Secretary Buttigieg,

I am writing to express my strong support for the San Francisco Municipal Transportation Agency's (SFMTA) Western Addition Community Safe Streets Project.

The SFMTA is seeking \$17 million through the Safe Streets and Roads for All (SS4A) grant program to improve traffic safety and connectivity in the Western Addition neighborhood. At the center of San Francisco, the Western Addition is a diverse residential neighborhood home to many low-income residents. Two culturally significant and historic commercial centers—the Fillmore District and Japantown—draw thousands of residents, workers, and visitors daily. The neighborhood suffers from high vehicle speeds and cut through traffic, and most streets are on the Vision Zero high-injury network, which are the 13% of streets where 75% of severe and fatal collisions occur. Funding through the SS4A program will allow the SFMTA to slow speeds and improve intersections to improve traffic safety outcomes and increase connectivity.

We want to make this neighborhood safe for the people who live, work, and travel there, and the SS4A grant will help us do that. This funding will support San Francisco's efforts to upgrade traffic and pedestrian crossing signals, implement 20 MPH speed limits, and install road diets on key corridors. We will also have a neighborhood-wide education and outreach campaign on safe driving and the impact of speeding, which will raise public awareness and strengthen the effectiveness of these capital investments. These recommendations are a result of public engagement conducted as part of the Western Addition Community Based Transportation Plan, which examined transportation needs and improvements emphasizing safer walking, biking, and access to transit.

I am offering my full support for SFMTA's Western Addition Community Safe Streets Project SS4A grant program application. I firmly believe that this project meets the goals and objectives of the SS4A grant program and I urge you to consider SFMTA's application.

Sincerely,

London N. Breed Mayor

NANCY PELOSI 12TH DISTRICT, CALIFORNIA

SPEAKER OF THE HOUSE

1236 LONGWORTH HOUSE OFFICE BUILDING WASHINGTON, DC 20515-0508 (202) 225-4965

Congress of the United States

House of Representatives Washington, DC 20515-0508 SAN FRANCISCO FEDERAL BUILDING 90-7TH STREET, SUITE 2-800 SAN FRANCISCO, CA 94103 (415) 556-4862 pelosi.house.gov

DISTRICT OFFICE:

September 2, 2022

The Honorable Pete Buttigieg Secretary United States Department of Transportation 1200 New Jersey Avenue, Southeast Washington, D.C. 20590

Dear Mr. Secretary:

Many thanks for the Department of Transportation's investments toward rebuilding our nation's infrastructure. I am writing to request your full and fair consideration of the San Francisco Municipal Transportation Agency's (SFMTA) \$17.6 million Safe Streets and Roads for All grant application to fund the Western Addition Community Safe Streets Project.

Home to the Filmore District, Japantown and many diverse, disadvantaged communities, the Western Addition is a significant cultural and historical hub for San Francisco that sees thousands of residents, workers and visitors travel its streets daily. Unfortunately, most of the neighborhood's streets are on San Francisco's high-injury network, where 75% of the City's traffic fatalities and serious injuries occur, and suffers from high vehicle speeds and cut-through traffic. It is essential that safety improvements be made to protect against further injuries that impact a disproportionate and disadvantaged community in San Francisco.

The Western Addition Community Safe Streets Project will improve traffic safety, slow vehicle speeds and emphasize alternative forms of transportation in the Western Addition by installing traffic signal upgrades, speed limit reductions, speed radar signs, pedestrian countdown signals and rapid flashing pedestrian beacons. SFMTA will also launch a multilingual education outreach campaign to raise awareness of the new speed limits in the neighborhood. These improvements are the result of a robust community engagement and outreach process that examined transportation needs and improvements, promoting safer walking, biking and access to transit. This level of community engagement ensures that the Western Addition neighborhood will see an equitable distribution of resources, so no San Franciscan is excluded from these critical improvements.

The SFMTA's Western Addition Community Safe Streets Project is essential to improving traffic safety, slowing vehicle speeds and emphasizing alternative forms of transportation in the many diverse and disadvantaged communities that call the Western Addition, home.

Thank you again, Mr. Secretary, for your consideration and I look forward to your response.

best regards,

NANCY PELOS

United States Senate

September 7, 2022

The Honorable Pete Buttigieg Secretary of Transportation Attn: Office of Infrastructure Finance and Innovation U.S. Department of Transportation 1200 New Jersey Avenue, SE Washington, DC 20590

Dear Secretary Buttigieg:

I write in support of the San Francisco Municipal Transportation Agency's (SFMTA) "Western Addition Community Safe Streets Project" through the Department of Transportation's Safe Streets and Roads for All (SS4A) program.

The Western Addition is a residential neighborhood and home to many low-income housing residents. However, as the neighborhood suffers from high vehicle speeds and cut-through traffic, most streets are on the Vision Zero high-injury network. Funding through the SS4A program will allow the SFMTA to slow speeds and improve intersections to increase traffic safety outcomes and connectivity.

Improved safety will be achieved through a combination of traffic signal upgrades and a comprehensive speed reduction program. These improvements include upgrading signal visibility, pedestrian countdowns, and curb ramps that meet the latest accessibility standards. Pedestrian-activated flashing beacons and speed radar signs will also be installed. Speed management, such as implementing 20 MPH speed limits where eligible, will compliment other safety measures and make walking, biking, and access to transit significantly safer.

I urge you to give the Western Addition Community Safe Streets Project SS4A grant program application your full consideration. If you have any questions, please do not hesitate to contact my San Francisco office at 415-393-0707.

Dianne Feinstein United States Senator

September 6, 2022

The Honorable Pete Buttigieg Secretary U.S. Department of Transportation 1200 New Jersey Avenue, S.E. Washington, D.C. 20590

RE: SS4A Application – Western Addition Community Safe Streets Project

Dear Secretary Buttigieg:

I write in support of the San Francisco Municipal Transportation Agency's (SFMTA) Safe Streets and Roads for All grant application for the Western Addition Community Safe Streets Project. The project is designed to slow speeds, increase connectivity, and improve traffic safety outcomes.

The Western Addition is a residential neighborhood in San Francisco home to many low-income housing residents and a large minority community. Two culturally significant commercial centers, the Fillmore District and Japantown, draw thousands of visitors daily. The neighborhood suffers from high vehicle speeds and cut-through traffic. Most of its streets are on the Vision Zero high-injury network.

It is my understanding the project would enhance road safety measures in the neighborhood through a combination of traffic signal upgrades and a comprehensive speed reduction program. Pedestrian safety enhancements such as countdown signals, upgraded curb ramps, pedestrian-activated flashing beacons, and speed radar signs are also included in the project.

Speed management improvements included in the project involve enacting 20 miles per hour speed limits where eligible. New speed limit signage in or along safety corridors would be installed, slowing speeds significantly. Speed radar signs and road diets/quick-builds on key corridors would also be implemented. The project also includes a neighborhood-wide education and outreach campaign on safe driving and the impact of speeding to raise public awareness.

I urge your full and fair consideration of SFMTA's application consistent with all applicable laws, rules, and regulations. Please keep my office informed of the status of this application, and if I can be of further assistance, please contact my Deputy State Director, Daniel Chen, at (650) 533-2207. Thank you for your consideration.

Respectfully submitted,

ALEX PADILLA United States Senator

Member, Board of Supervisors District 5

City and County of San Francisco

DEAN PRESTON

Peter Buttigieg, Secretary of Transportation Office of the Secretary Department of Transportation 1200 New Jersey Avenue, SE Washington, D.C. 20590

RE: 2022 San Francisco Municipal Transportation Agency Safe Streets and Roads for All Grant Application

Dear Secretary Buttigieg,

I am writing to express my strong support along with the organizations listed below for the San Francisco Municipal Transportation Agency's (SFMTA) community-led Western Addition Community Safe Streets Project. The Western Addition Community-Based Transportation Plan brought local residents, community organizations, and transportation agencies together to address critical neighborhood transportation and pedestrian challenges.

The SFMTA is seeking approximately \$17.6 million through the Safe Streets and Roads for All (SS4A) grant program to improve traffic safety and connectivity in the Western Addition neighborhood. At the center of San Francisco, the Western Addition is a residential neighborhood home to many low-income residents. The Western Addition includes the Fillmore neighborhood, once known as the Harlem of the West, and to this day one of the few remaining Black neighborhoods in San Francisco. Two culturally significant and historic commercial centers – the Fillmore and Japantown draw thousands of residents, workers, and visitors daily. The neighborhood suffers from high vehicle speeds and cut through traffic, and most streets are on the Vision Zero high-injury network. Funding through the SS4A will allow the SFMTA to implement the Community's plan to slow speeds and improve intersections to improve traffic safety outcomes and increase connectivity.

Improved safety will be achieved through a combination of traffic signal upgrades and the implementation of a comprehensive speed reduction program. Safety improvements include making signal visibility upgrades, pedestrian signal improvements such as pedestrian countdown signals, and upgraded curb ramps that meet the latest accessibility standards. Pedestrian-activated flashing beacons and speed radar signs will also be installed. Nearly all the intersections designated for signal upgrades are on the City's Vision Zero High Injury Network.

Speed management improvements will complement traffic signal upgrades and will include strategies such as implementing 20 MPH speed limits where eligible. New speed-limit signage in or along safety corridors, as authorized by California Assembly Bill 43 will be installed, slowing speeds significantly.

Speed radar signs and road diets/quick-builds on key corridors will be implemented. A neighborhood-wide education and outreach campaign on safe driving and the impact of speeding will raise public awareness and strengthen the effectiveness of these capital investments.

These safety improvements will implement the Western Addition Community Based Transportation Plan, adopted in April 2017, which identified a set of capital projects to improve safety and connectivity throughout the community. The Plan is the result of a robust community engagement and outreach process that examined transportation needs and improvements emphasizing safer walking, biking, and access to transit.

I am offering my strongest support for SFMTA's **Western Addition Community Safe Streets Project** SS4A grant program application. I firmly believe that this project meets the goals and objectives of the SS4A grant program and I urge you to strongly consider this application for funding support.

Please do not hesitate to reach out if we can provide any additional information. Thank you in advance for your consideration.

Sincerely,

Dean Preston Supervisor, District 5

September 12, 2022

Peter Buttigieg, Secretary of Transportation Office of the Secretary Department of Transportation 1200 New Jersey Avenue, SE Washington, D.C. 20590

RE: 2022 San Francisco Municipal Transportation Agency Safe Streets and Roads for All Grant Application

Dear Secretary Buttigieg,

I am writing to express Walk San Francisco's strong support for the San Francisco Municipal Transportation Agency's (SFMTA) Western Addition Community Safe Streets Project.

Walk San Francisco, founded in 1998, is the city's only pedestrian advocacy organization working to transform San Francisco's most dangerous streets and make San Francisco the most pedestrian-friendly city in the country. Every day, at least three people are hit while walking on San Francisco's streets. Walk SF focuses our efforts through a data-driven approach targeting the most dangerous streets impacting our most vulnerable road users.

San Francisco's Western Addition neighborhood is a residential neighborhood in the heart of the city, and home to many low-income neighbors and communities of color. The Fillmore District, a historical San Francisco Black community, and Japantown, are vital cultural and commercial centers within the neighborhood, where tens of thousands of residents, workers, and visitors travel every yet. Unfortunately, it is also home to numerous Vision Zero High-Injury Corridors - the city's most dangerous 13% of streets where 75% of serious and fatal crashes happen. These dangerous street conditions are due to wide, fast moving streets, and outdated infrastructure.

Fortunately, numerous community-based organizations, residents, merchants, and decision-makers shaped a plan with safety improvements that address these dangers: the Western Addition Community Based Transportation Plan, adopted in April 2017. Following strong community engagement, this plan identified a set of capital projects that can make streets safer and better connect these communities through modes like walking, biking, and transit. By funding these improvements, the SFMTA can slow speeds and improve intersection safety. Traffic signal upgrades will make signals more visible, provide pedestrian countdown signals so they can know when its safe to cross, and add activated flashing beacons that improve visibility at important crosswalks. These signal upgrades are focused on those that needed it most: those on the High-Injury Network.

A speed management program will bring down dangerous speeds - the top cause of fatal crashes in San Francisco - by reducing speed limits to 20mph where possible, add speed radar signs, and implement quick-build designs that narrow street crossings through road diets and similar designs. By using these proven engineering tools, this project can make Western Additions safe for people walking - from an eight-year-old walking to school to an 80-year-old walking to a doctor's appointment.

I offer Walk San Francisco's strongest support for SFMTA's Western Addition Community Safe Streets Project SS4A grant program application. This project matches the goals of the SS4A grant program, and I ask you to consider this application for funding support.

With appreciation,

Jodie Medeiros Executive Director

September 2, 2022

Peter Buttigieg, Secretary of Transportation Office of the Secretary Department of Transportation 1200 New Jersey Avenue, SE Washington, D.C. 20590

RE: 2022 San Francisco Municipal Transportation Agency Safe Streets and Roads for All Grant Application

Dear Secretary Buttigieg,

I am writing to express my strong support for the San Francisco Municipal Transportation Agency's (SFMTA) **Western Addition Community Safe Streets Project**.

The SFMTA is seeking approximately \$17.6 million through the Safe Streets and Roads for All (SS4A) grant program to improve traffic safety and connectivity in the Western Addition neighborhood. At the center of San Francisco, the Western Addition is a residential neighborhood home to many low-income housing residents, as well as a large minority community. Two culturally significant and historic commercial centers –the Fillmore District and Japantown draw thousands of residents, workers, and visitors daily. The neighborhood suffers from high vehicle speeds and cut through traffic, and most streets are on the Vision Zero high-injury network. Funding through the SS4A will allow the SFMTA to slow speeds and improve intersections to improve traffic safety outcomes and increase connectivity.

Improved safety will be achieved through a combination of traffic signal upgrades and the implementation of a comprehensive speed reduction program. Pedestrian activated flashing beacons and speed radar signs will also be installed. Nearly all the intersections designated for signal upgrades are on the City's Vision Zero High Injury Network.

Speed management improvements will complement traffic signal upgrades will include strategies such as implementing 20 MPH speed limits where eligible. New speed-limit signage in or along safety corridors, as authorized by California Assembly Bill 43 will be installed, slowing speeds significantly. Speed radar signs and road diets/quick-builds on key corridors will be implemented. A neighborhood-wide education and outreach campaign on safe driving and the

impact of speeding will raise public awareness and strengthen the effectiveness of these capital investments.

These safety improvements implement the Western Addition Community Based Transportation Plan, adopted in April 2017, which identified a set of capital projects to improve safety and connectivity throughout the community. The Plan is the result of a robust community engagement and outreach process that examined transportation needs and improvements emphasizing safer walking, biking, and access to transit. The improvements to intersections including signal upgrades and APSs are especially important to the blind, deafblind, and visually impaired community. No matter what level of Orientation & Mobility (O&M) training an individual may have received, there is no defense against the abundance of quiet cars that are on our streets today. In the vibrant life of downtown San Francisco, with bustling pedestrians, street musicians, and various construction sites distracting our focus, crossing intersections as a blind person can be challenging. The APS is a welcome safety tool as a guide and reassurance when previously there may have been a level of fear. We can now confidently cross the street, using our O&M skills of proceeding with the parallel surge of traffic, as well as, the confirmation of the APS.

I am offering my strongest support for SFMTA's **Western Addition Community Safe Streets Project** SS4A grant program application. I firmly believe that this project meets the goals and objectives of the SS4A grant program and I urge you to strongly consider this application for funding support.

Sincerely, Sheri Albers Community Outreach Coordinator LightHouse for the Blind and Visually Impaired 415-694-7331 Salbers@lighthouse-sf.org September 12, 2022

Peter Buttigieg, Secretary of Transportation Office of the Secretary Department of Transportation 1200 New Jersey Avenue, SE Washington, D.C. 20590

SUBJECT:

2022 San Francisco Municipal Transportation Agency Safe Streets and Roads for All Grant Application Local Match Commitment

Dear Secretary Buttigieg:

The San Francisco County Transportation Authority is pleased to support the San Francisco Municipal Transportation Agency's (SFMTA's) application for the SS4A Grant Program to implement safety improvements recommended by the Western Addition Community Based Transportation Plan (CBTP). The San Francisco County Transportation Authority administers and oversees the delivery of the Proposition K (Prop K) half-cent local transportation sales tax program and the Proposition AA (Prop AA) vehicle registration fee. We helped fund development of the Western Addition CBTP and have previously allocated over \$3 million in Prop K and Prop AA funds to implement community identified priorities of the plan.

I hereby affirm that the San Francisco County Transportation Authority has over \$4.5 million in Prop K sales tax funds programmed for SFMTA that could be used as local match for SFMTA's Western Addition CBTP implementation project. If the grant is awarded, we will support SFMTA's efforts to seek an allocation of sales tax funds for local match purposes. I enthusiastically support this application for the SS4A Grant Program. Thank you for your consideration of the SFMTA's application. If you have any questions, please contact Mike Pickford, Principal Transportation Planner, at (415) 522-4822 or mike.pickford@sfcta.org.

Sincerely,

Ichang

Tilly Chang Executive Director

Attachment 5 WESTERN ADDITION COMMUNITY SAFE STREETS PROJECT

SFMTA.COM/WESTERNADDITION

BACKGROUND

The Western Addition Community Safe Streets project (WACSS) includes traffic signal upgrades and speed management improvements in support of the City's Vision Zero goals. These safety improvements were identified in the Western Addition Community Based Transportation Plan (WACBTP). The SFMTA was recently awarded \$17,613,284 in funding through the <u>USDOT Safe</u> <u>Streets and Roads for All (SS4A) Program</u>.

OVERVIEW

The Western Addition Traffic Signal Upgrades Phase 1 project is estimated to begin construction in spring

2023. Near term improvements identified in the WACBTP have been implemented. These include daylighting, continental crosswalks, bulb-outs, pedestrian actuated rectangular rapid flashing beacons, and advanced limit lines.

The Western Addition Traffic Signal Upgrades Phase 2 project has started design using local funds and is proposed to complete design and implement improvements at 16 intersections as part of the WACSS project.

Key elements of the WACSS project are as follows:

deleon@sfmta.com, vicente.romero@sfmta.com or

uyen.ngo@sfmta.com

- Signal visibility enhancements to improve safety through larger 12" signal heads and mast arms
- Pedestrian signal improvements such as pedestrian countdown signals (PCS), accessible pedestrian signals (APS), pedestrian activated flashing beacons, upgraded streetlighting, and upgraded curb ramps
- Speed management strategies such as lower speed limits through 20 mph signage, radar speed signs, quick build improvements based on WACBTP, and additional community engagement
- Multilingual education and outreach campaign on traffic safety and speed management

SFMTA.COM/WESTERNADDITION

WACSS PROJECT BUDGET

The overall budget including design, construction, and education/outreach campaign activities is estimated to be \$22M. SFMTA was recently awarded \$17.6M in SS4A grant funding with a 20% local match of \$4.4M.

FULL TRAFFIC SIGNAL UPGRADES

Full signal upgrades include new larger 12" signal heads and mast-arms, conduits, poles, controllers, enhanced streetlighting, and upgraded accessible curb ramps.

SPEED LIMIT REDUCTIONS AND SPEED RADAR SIGNS

Speed management strategies include 20 MPH speed limit reduction signage as authorized by California Assembly Bill 43 (AB 43) and radar speed signs to make drivers aware of speed limits and change driver behavior.

PEDESTRIAN COUNTDOWN SIGNALS AND ACCESSIBLE PEDESTRIAN SIGNALS

Pedestrian countdown signals (PCS) and accessible pedestrian signals (APS) provide pedestrians with additional guidance on when to start crossing safely at signalized intersections and are particularly helpful for seniors and people with vision, hearing, and mobility disabilities.

MULTILINGUALEDUCATION ANDOUTREACH CAMPAIGN

WACSS includes education and outreach efforts to increase awareness of the impacts of speed and new speed limits set in the neighborhood.

RECTANGULAR RAPID FLASHING BEACONS

Rectangular rapid flashing beacons (RRFBs) caution drivers with a flashing visual that pedestrians will be crossing at the crosswalk.
